## Introduction

The NBP data acquisition systems continuously log data from the instruments used during the cruise. This document describes:

- The structure and organization of the data on the distribution media
- The format and contents of the data strings
- Formulas for calculating values
- Information about the specific instruments in use during the cruise
- A log of acquisition problems and events during the cruise that may affect the data
- Scanned calibration sheets for the instruments in use during the cruise.

The data is distributed on a DVD-R written in ISO9660 level-1 format. It is readable by virtually every computing platform.

All the data has been compressed using Unix “gzip,” identifiable by the “.gz” extension. It has been copied to the distribution media in the Unix tar archive format, “.tar” extension. Tools are available on all platforms for uncompressing and de-archiving these formats: On Macintosh, use Stuffit Expander with DropStuff. On Windows operating systems use WinZip.

*IMPORTANT: Read the last section, “Acquisition Problems and Events,” for important information that may affect the processing of this data.*

### Extracting Data

The Unix tar command has many options. It is often useful to know exactly how an archive was produced when expanding its contents. All archives were created using the command,

```
tar cvf archive_filename files_to_archive
```

To create a list of the files in the archive, use the Unix command,

```
tar tvf archive_filename > contents.list
```

where contents.list is the name of the file to create

To extract the files from the archive:

```
tar xvf archive_filename file(s)_to_extract
```

G-zipped files will have a ".gz" extension on the filename. These files can be decompressed after de-archiving, using the Unix command,

```
gunzip filename.gz
```

## Distribution Contents

### Cruise Information

#### ***Cruise Track***

The distribution DVD includes a GMT cruise track file (NBP0305.trk). It contains the longitude and latitude at one-minute intervals extracted from the NBP0305.gmt file.

One PostScript cruise track file has been produced and placed in the /plots directory. The plot is standard US Letter sized (8.5" x 11").

#### ***Satellite Images***

Satellite Images processed for this cruise can be found in the directory imagery tar files, ice and wx (weather). Files are named using the convention, IdDDDYYA.jpg where:

Id = image type (is = ice ssmi, iv = ice visible, cw = seawifs, wx = weather)  
 DDD = year-day  
 YY = year  
 A = allows for multiple images of one type for one day

### NBP Data Products

Two datasets are created on each cruise: JGOFS and MGD77.

#### ***JGOFS***

The JGOFS data set can be found on the distribution media in the file /process/<cruisenumber>.tar. The archive contains a single file produced each day named jgDDD.dat.gz where DDD is the year-day the data was acquired. The ".gz" extension indicates that the individual files are compressed before archiving. The daily file consists of 22 columnar fields in text format described in the table below. The JGOFS data set is obtained primarily by applying calibrations to raw data and decimating to whole minute intervals. Several fields are derived measurements from more than a single raw input. For example, Course Made Good (CMG) and Speed Over Ground (SOG) are calculated from gyro and GPS inputs. During the cruise, the JGOFS data set produces the daily data plots. Note: Null, unused, or unknown fields are indicated as "NAN" in the JGOFS data.

| Field | Data   | Units                                 |
|-------|--|---------------------------------------|
| 01    | GMT date   | dd/mm/yy                              |
| 02    | GMT time   | hh:mm:ss                              |
| 03    | NGL latitude (negative is South)                         | tt.ttt                                |
| 04    | NGL longitude (negative is West)                         | ggg.gggg                              |
| 05    | Speed over ground  | Knots                                 |
| 06    | GPS HDOP   | -                                     |
| 07    | Gyro Heading   | Degrees (azimuth)                     |
| 08    | Course made good   | Degrees (azimuth)                     |
| 09    | Mast PAR   | $\mu$ Einstens/meter <sup>2</sup> sec |
| 10    | Sea surface temperature                                  | °C                                    |
| 11    | Sea surface conductivity                                 | siemens/meter                         |
| 12    | Sea surface salinity                                     | PSU                                   |
| 13    | Sea depth (uncorrected, calc. sw sound vel.<br>1500 m/s) | meters                                |
| 14    | True wind speed (port windbird)                          | meters/sec                            |

| Field | Data                                | Units             |
|-------|-------------------------------------|-------------------|
| 15    | True wind direction (port windbird) | degrees (azimuth) |
| 16    | Ambient air temperature             | °C                |
| 17    | Relative humidity                   | %                 |
| 18    | Barometric pressure                 | MBars             |
| 19    | Sea surface fluorometry             | volts (0-5 FSO)   |
| 20    | Not used                            | -                 |
| 21    | PSP                                 | W/m <sup>2</sup>  |
| 22    | PIR                                 | W/m <sup>2</sup>  |

## MGD77

The MGD77 data set is contained in a single file for the entire cruise. It can be found in the top level of the distribution data structure as NBP0305.mgd. Also at the root level, NBP0305.gmt is the output of the mgd77togmt utility using NBP0305.mgd as input. The NBP0305.gmt file can be used by GMT plotting software.

The data used to produce the NBP0305.mgd file can be found on the distribution media in the file /process/0305proc.tar. The data files in the archive contain a day's data and follow the naming convention Dddd.fnl.gz, where ddd is the year-day. These files follow a space-delimited columnar format that may be more accessible for some purposes. They contain data at one-second intervals rather than one minute and are individually "gzipped" to save space. Below is a detailed description of the MGD77 data set format. The other files in the archive contain interim processing files and are included to simplify possible reprocessing of the data using the RVDAS NBP processing scripts.

All decimal points are implied. Leading zeros and blanks are equivalent. Unknown or unused fields are filled with 9's. All "corrections", such as time zone, diurnal magnetics, and EOTVOS, are understood to be added.

| Col   | Len | Type | Contents                      | Description, Possible Values, Notes   |
|-------|-----|------|-------------------------------|---|
| 1     | 1   | Int  | Data record type              | Set to "5" for data record  |
| 2-9   | 8   | Char | Survey identifier             |   |
| 10-12 | 3   | int  | Time zone correction          | Corrects time (in characters 13-27) to GMT when added; 0 = GMT                              |
| 13-16 | 4   | int  | Year                          | 4 digit year  |
| 17-18 | 2   | int  | Month                         | 2 digit month   |
| 19-20 | 2   | int  | Day                           | 2 digit day   |
| 21-22 | 2   | int  | Hour                          | 2 digit hour  |
| 23-27 | 5   | real | Minutes x 1000                |   |
| 28-35 | 8   | real | Latitude x 100000             | + = North<br>- = South. (-9000000 to 9000000)   |
| 36-44 | 9   | real | Longitude x 100000            | + = East<br>- = West. (-18000000 to 18000000)   |
| 45    | 1   | int  | Position type code            | 1=Observed fix<br>3=Interpolated<br>9=Unspecified   |
| 46-51 | 6   | real | Bathymetry, 2-way travel time | In 10,000th of seconds. Corrected for transducer depth and other such corrections           |
| 52-57 | 6   | real | Bathymetry, corrected depth   | In tenths of meters.  |
| 58-59 | 2   | int  | Bathymetric correction code   | This code details the procedure used for determining the sound velocity correction to depth |
| 60    | 1   | int  | Bathymetric type code         | 1 = Observed<br>3 = Interpolated (Header Seq. 12)<br>9 = Unspecified                        |
| 61-66 | 6   | real | Magnetics total field,        | In tenths of nanoteslas (gammas)  |

| Col     | Len | Type | Contents   | Description, Possible Values, Notes   |
|---------|-----|------|--|---|
|         |     |      | 1 <sup>st</sup> sensor                           |   |
| 67-72   | 6   | real | Magnetics total field,<br>2 <sup>nd</sup> sensor | In tenths of nanoteslas (gammas), for trailing sensor   |
| 73-78   | 6   | real | Magnetics residual field                         | In tenths of nanoteslas (gammas). The reference field used is in Header Seq. 13   |
| 79      | 1   | int  | Sensor for residual field                        | 1 = 1 <sup>st</sup> or leading sensor<br>2 = 2 <sup>nd</sup> or trailing sensor<br>9 = Unspecified  |
| 80-84   | 5   | real | Magnetics diurnal correction                     | In tenths of nanoteslas (gammas). (In nanoteslas) if 9-filled (i.e., set to "+9999"), total and residual fields are assumed to be uncorrected; if used, total and residuals are assumed to have been already corrected. |
| 85-90   | 6   | F6.0 | Depth or altitude of magnetics sensor            | (In meters)<br>+ = Below sea level<br>3 = Above sea level   |
| 91-97   | 7   | real | Observed gravity                                 | In 10 <sup>th</sup> of mgals. Corrected for Eotvos, drift, tares  |
| 98-103  | 6   | real | EOTVOS correction                                | In 10 <sup>th</sup> of mgals.<br>$E = 7.5 V \cos \phi \sin \alpha + 0.0042 V^*V$  |
| 104-108 | 5   | real | Free-air anomaly                                 | In 10 <sup>th</sup> of mgals<br>G = observed<br>G = theoretical   |
| 109-113 | 5   | char | Seismic line number                              | Cross-reference for seismic data  |

| 120     | 1   | int  | Quality code for navigation                      | 5=Suspected, by the originating institution<br>6=Suspected, by the data center<br>9=No identifiable problem found   |

## Science of Opportunity

### ADCP

The shipboard ADCP system measures currents in the depth range from about 30 to 300 m -- in good weather. In bad weather or in ice, the range is less, and sometimes no valid measurements are made. It is the USAP-funded project of Eric Firing (University of Hawaii) and Teri Chereskin (Scripps Institution of Oceanography). ADCP data collection occurs on the both LMG and the NBP for the benefit of the scientists on individual cruises, and for the long-term goal of building a climatology of current structure in the Southern Ocean.

The ADCP data set collected during this cruise has been placed on the distribution media in the archive /adcp/0305adcp.tar. The archive consists of a single file for each day of data collection. The files are named PINGDATA.xxxx where xxxx is a day number that is NOT a year-day. For the date, use the file's creation date.

Some ADCP data is also transmitted to RVDAS. East and north vectors for ship's speed relative to the reference layer and ship's heading are archived as 0305adcp.tar in the directory /rvdas/nav.

### PCO<sub>2</sub>

The NBP carries Lamont-Doherty Earth Observatory's (LDEO) pCO<sub>2</sub> system and RPSC staff maintains it. Data is sent to LDEO at the end of each cruise. The pCO<sub>2</sub> data is transmitted and archived on RVDAS. You will find it in a file named 0305pc02.tar in

the process/ directory, which contains the pCO<sub>2</sub> instrument's data merged with GPS, meteorological and other oceanographic measurements. For more information contact Colm Sweeney ([csweeney@ldeo.columbia.edu](mailto:csweeney@ldeo.columbia.edu)) for additional information.

## Cruise Science

### CTD

The CTD data have been placed in the tar file /ocean/0305ctd.tar.

### Cruise specific data

The data in following directories were generated by the science party, RadVans, prr, and puvguv. The data in rvdas/uw/0305gen.tar is from an instrument provided by the science party.

## RVDAS

The Research Vessel Data Acquisition System (RVDAS) was developed at Lamont-Doherty Earth Observatory of Columbia University and has been in use on its research ship for many years. It has been modified for use on the USAP research vessels.

Daily data processing of the RVDAS (Research Vessel Data Acquisition System) data is performed to convert values into useable units and as a check of the proper operation of the DAS. Both raw and processed data sets from RVDAS are included in the data distribution. The tables below provide detailed information on the data. Be sure to read the "Significant Acquisition Events" section for important information about data acquisition during this cruise.

### Sensors and Instruments

RVDAS data is divided into two general categories, *underway and navigation*. They can be found on the distribution media as subdirectories under the top level rvdas directory: /rvdas/uw, and /rvdas/nav. Processed oceanographic data is in the top level directory, /process. Each instrument or sensor produces a data file named with its channel ID. Each data file is g-zipped to save space on the distribution media. Not all data types are collected every day or on every cruise.

The naming convention for data files produced by the sensors and instruments is

NBP[CruiseID][ChannelID].dDDD

Example: NBP0107.met1.d317

- The CruiseID is the numeric name of the cruise, in this case, NBP0305.
- The ChannelID is a 4-character code representing the system being logged. An example is "met1," the designation for meteorology.
- DDD is the day of year the data was collected

### Underway Sensors

### Meteorology and Radiometry

| Measurement | Channel ID | Collect. Status | Rate | Instrument |
|-------------|------------|-----------------|------|------------|
|-------------|------------|-----------------|------|------------|

| Measurement          | Channel ID | Collect. Status | Rate     | Instrument          |
|----------------------|------------|-----------------|----------|---------------------|
| Air Temperature      | met1       | continuous      | 1 sec    | R. M. Young 41372LC |
| Relative Humidity    | met1       | continuous      | 1 sec    |                     |
| Wind Speed/Direction | met1       | continuous      | 1 sec    | R.M. Young 05106    |
| Barometer            | met1       | continuous      | 1 sec    | R.M. Young 61201    |
| PIR (LW radiation)   | met1       | continuous      | 1 sec    | Eppley PIR          |
| PSP (SW radiation)   | met1       | continuous      | 1 sec    | Eppley PSP          |
| PAR                  | met1       | continuous      | 1 sec    | BSI QSR-240         |
| GUV                  | guv        | continuous      | 2 sec    | BSI PUV-511         |
| PUV                  | puv        | collected       | On casts | BSI PUV-500         |

## Geophysics

| Measurement  | Channel ID | Collect. Status | Rate    | Instrument         |
|--------------|------------|-----------------|---------|--------------------|
| Gravimeter   | grv1       | not collected   | 10 sec* | LaCoste & Romberg  |
| Magnetometer | mag1       | not collected   | 15 sec  | EG&G G-866         |
| Bathymetry   | bat1       | continuous      | Varies  | ODEC Bathy 2000    |
| Bathymetry   | knu1       | not collected   | Varies  | Knudsen 320B/R     |
| Bathymetry   | sim1       | depth < 2500 m  | Varies  | Simrad EK500 Sonar |

\*Data is output every second but it only changes every 10 seconds.

## Oceanography

| Measurement      | Channel ID  | Collect. Status | Rate   | Instrument           |
|------------------|-------------|-----------------|--------|----------------------|
| Conductivity     | tsg1        | Continuous      | 6 sec  | SeaBird 21           |
| Salinity         | tsgfl       | Continuous      | 6 sec  | Calc. from pri. temp |
| Sea Surface Temp | tsg1        | Continuous      | 6 sec  | SeaBird 3-01/S       |
| Fluorometry      | flr1        | Continuous      | 1 sec  | Turner 10-AU-005     |
| Fluorometry      | flr1 & tsg1 | Continuous      | 6 sec  |                      |
| Transmissometry  | tsg1        | Continuous      | 6 sec  | WET Lab C-Star       |
| pCO <sub>2</sub> | pco2        | Continuous      | 70 sec | (LDEO)               |
| ADCP             | adcp        | Continuous      | varies | RD Instruments       |

## Navigational Instruments

| Measurement  | Channel ID | Collect. Status | Rate    | Instrument         |
|--------------|------------|-----------------|---------|--------------------|
| Altitude GPS | Adu1       | continuous      | 1 sec   | Ashtech ADU2       |
| Trimble GPS  | PCOD       | Continuous      | 1 sec   | Trimble 20636-00SM |
| Gyro         | gyr1       | Continuous      | 0.2 sec | Yokogawa Gyro      |
| SeaPath      | Seap       | Continuous      | 1 sec   | SeaPath 200        |

## Data

Data is received from the RVDAS system via RS-232 serial connections. A time tag is added at the beginning of each line of data in the form,

yy+dd:hh:mm:ss.sss [data stream from instrument]

where

yy = two-digit year  
 ddd = day of year  
 hh = 2 digit hour of the day  
 mm = 2 digit minute  
 ss.sss = seconds

All times are reported in UTC.

The delimiters that separate fields in the raw data files are often spaces and commas but can be other characters such as : = @. Occasionally no delimiter is present. Care should be taken when reprocessing the data that the field's separations are clearly understood.

In the sections below a sample data string is shown, followed by a table that lists the data contained in the string.

## Underway Data

### Meteorology (met1)

## Navigational Data

### Seapath GPS (seap)

The Seapath GPS outputs six data strings, four in NMEA format and two in proprietary PSXN format:

- GPZDA
- GPGGA
- GPVTG
- GPHDT
- PSXN, 22
- PSXN, 23

#### GPZDA

02+253:00:00:00.772 \$GPZDA,235947.70,09,09,2002,,\*7F

## Calculations

The file *rvdascal.txt* located in the */reports* directory contains the calibration factors for shipboard instruments. This was the file used by the RVDAS processing software.

### TSG

Raw TSG data is stored as a 20 byte (character) long hex string

| Bytes | Data                    |
|-------|-------------------------|
| 1-4   | Sensor Temperature      |
| 5-8   | Conductivity            |
| 9-14  | Remote Temperature      |
| 15-17 | Fluorometer voltage     |
| 18-20 | Transmissometer voltage |

The coefficients for temperature and conductivity sensors can be found the *rvdascal.txt* file and on the calibrations sheets in the appendix.

#### Calculating Temperature – ITS-90

```
T = decimal equivalent of bytes 1-4
Temperature Frequency: f = T/19 +2100
Temperature = 1/{g + h[ln(f0/f)] + i[ln2(f0/f)] + j[ln3(f0/f)]} - 273.15 (°C)
```

#### Calculating Conductivity – ITS-90

```
C = decimal equivalent of bytes 5-8
Conductivity Frequency f = sqrt(C*2100+6250000)
Conductivity = (g + hf2 + if3 + jf4)/[10(1 + δt + εp)]
(siemens/meter)
t = temperature (°C); p = pressure (decibars); δ = Ctcov; ε = CPcor
```

#### Calculating Fluorometry Voltage from the TSG

```
f = decimal equivalent of bytes 15-17
Fluorometry Voltage = f/819
```

#### Calculating Transmittance

```
Vdark = 0.058 V
Vref = 4.765 V
t = decimal equivalent of bytes 18 – 20
Transmissometer Voltage (Vsignal) = t/819
% Transmittance = (Vsignal – Vdark) / (Vref – Vdark)
```

## PAR

```
raw data = mV
calibration scale = 6.08 V/(μEinstiens/cm2sec)
offset (Vdark) = 0.3 mV
(raw mV – Vdark)/scale x 104 cm2/m2 x 10-3 V/mV= μEinstiens/m2sec
or
(data mV – 0.3 mV) x 1.65 (μEinstiens/m2sec)/mV =
μEinstiens/m2sec
```

**PIR**

```
raw data = mV  
calibration scale = 4.13 x 10-6 V/(W/m2)  
data mV / (scale x 103 mV/V) = W/m2  
or  
data mV x 242.1(W/m2)/mV = W/m2
```

**PSP**

```
raw data = mV  
calibration scale = 8.28 x 10-6 V/(W/m2)  
data mV / (scale x 103 mV/V) = W/m2  
or  
data mV x 120.7 (W/m2)/V = W/m2
```

## Acquisition Problems and Events

This section lists problems with acquisition noted during this cruise including instrument failures, data acquisition system failures and any other factor affecting this data set. The format is ddd:hh:mm (ddd is year-day, hh is hour, and mm is minute). Times are reported in GMT.

| <b>Start</b> | <b>End</b> | <b>Description</b>  |
|--------------|------------|---|
| 300:01:30    |            | Start Data Acquisition – DAS on                                     |
|              | 301:12:00  | Enter NZ waters – DAS off   |
| 302:12:00    |            | Leave NZ waters – DAS on  |
| 303:05:51    | 303:06:01  | Data Acquisition system off   |

Description Mk III Aquatracka (Chlorophyll-a)

Serial Number 088080

**REPORT**

The fluorometer was exposed to various concentrations of Chlorophyll-a dissolved in acetone in addition to pure water and pure acetone. The following formula was derived from the readings to relate instrument output to chlorophyll-a concentration.

$$\text{Conc.} = (0.0157 \times 10^{\text{Output}}) - 0.037$$

Where:-

conc. = fluorophor concentration in µg/l

Output = Aquatracka output in volts

The above formula can be used in the range 0 - 100 microgrammes per litre to an uncertainty of 0.02 microgrammes per litre plus 8% of value.

## Notes

The above formula has been derived using Chlorophyll-a dissolved in acetone. No guarantee is given as to the performance of the instrument to biologically active chlorophyll in sea-water.

The zero offset has been determined in the laboratory using purified water from a reverse osmosis/ion exchange column. It is possible that purer water may be found in clean deep ocean conditions. Under these conditions, the offset shown in the above formula should be replaced by the antilogarithm of the Aquatracka output in the purest water found, multiplied by the scale factor.

---

Serial number 088080      Page 1 of 2

Fluorimeter calibration readings

Ambient temperature 20°C

Output for detector mechanically blanked 0.296 Volts

Output for pure water 0.375 Volts

| chlorophyll concentration<br>in acetone<br>( $\mu\text{g/l}$ ) | Output (volts) |
|--|----------------|
| Acetone (pure)   | 0.3297         |
| 0.1038   | 0.9715         |
| 0.3114   | 1.3278         |
| 1.038  | 1.8172         |
| 3.10362  | 2.3170         |
| 10.2762  | 2.8166         |
| 30.2058  | 3.2842         |
| 94.3542  | 3.7660         |

The uncertainty of the chlorophyll concentration is estimated not to exceed 3%. The uncertainty of output voltage measurement is estimated not to exceed 2mV.

Signed

Date 23.02.03

**Transmissometer**

**Wetlabs C-Star Transmissometer**  
**N.B.Palmer Onboard Calibration Sheet**

**Calibration Date:** 02/25/03

**Serial Number:** CST-397DR

**Technician:** Wetlabs Job #0009009 (from Wetlabs Cal Sheet)

Use the following table to enter voltages when performing an annual calibration of the instrument:

|                    |       |   |
|--------------------|-------|---|
| $Y_0 = V_d$        | 0.059 | Voltage Blocked   |
| $A_0 = V_{air}$    | 4.818 | Voltage in air  |
| $W_0 = V_{ref}$    | 4.778 | Voltage in pure filtered H <sub>2</sub> O from the Nanopure system. |
| Cal. Temp of Water | 19.4  | Temperature of the water during calibration. (Centigrade)           |
| Ambient Temp       | 20.5  | Air temperature during the calibration. (Centigrade)                |

The following equation is used by RVDas to obtain % of Transmittance:

$$\% \text{ Transmission} = 100\% * (V_{sig} - V_d) / (V_{ref} - V_d) \quad V_{sig} = \text{Signal Voltage at any point in time.}$$

Use the following table to enter measured voltages when putting the instrument in use:

Note: Use the system that the instrument is being installed in to measure the voltage.  
(i.e., CTD: Use the CTD Deck unit and read the voltage on the CTD Computer with the system on.)  
*Make sure the lenses are clean and dry!*

| Date:                             | Technician: | System: | Value | Comments                          |
|-----------------------------------|-------------|---------|-------|-----------------------------------|
|                                   |             |         |       |                                   |
| $Y_1 = V_{dark} (\text{current})$ |             |         |       | Current measured blocked voltage. |
| $A_1 = V_{air} (\text{current})$  |             |         |       | Current measured voltage in air.  |
| $T_w$                             |             |         | 100%  | %Transmission in pure water.      |

Use the following equations to obtain the M and B constants for Seasave for both the CTD and Thermosalinograph:

(Select Chelsea/Seatech/ Wetlab CStar in Seasave for Windows or Transmissometer in Seacon for DOS).  
(Do NOT select Beam Transmissometer or WetLab AC3)

$$M = (T_w / W_0) * (A_0 - Y_0) / (A_1 - Y_1) \quad B = -M Y_1$$

$$M = (100 / \quad ) * ( \quad - \quad ) / ( \quad - \quad ) \quad B =$$

$$M = \quad \quad \quad B =$$

$$\text{Path Length (M)} = 0.250$$

Caution: Do Not exceed 12000 rpm during Wind Speed test.

Wind Speed Threshold < 2.9 gm?  Yes  
 Wind Direction Threshold < 30 gm?  Yes

#### Additional Comments

Note: Delta Windspeed should not exceed + or - 0.3 m/s for 0 - 5000 rpm

**STANDARDIZATION OF  
EPPLEY PRECISION INFRARED RADIOMETER  
Model PIR**

Serial Number: 32845F3

Resistance: 739 Ω at 23 °C  
 Temperature Compensation Range: -20 to 40 °C

This pyrgeometer has been compared with Precision Infrared Radiometer, Serial Number 29326F3 in Eppley's Blackbody Calibration System under radiation intensities of approximately 200 watts meter<sup>-2</sup> and an average ambient temperature of 24 °C.

As a result of a series of comparisons, it has been found to have a sensitivity of:

$$4.14 \times 10^{-8} \text{ volts/watts meter}^{-2}$$

The calculation of this constant is based on the fact that the relationship between radiation intensity and emf is rectilinear to intensities of 700 watts meter<sup>-2</sup>. This radiometer is linear to within ±1.0% up to this intensity.

The calibration of this instrument is traceable to the International Practical Temperature Scale (IPTS) through a precision low-temperature blackbody.

**STANDARDIZATION  
OF  
EPPLEY PRECISION SPECTRAL PYRANOMETER  
Model PSP**

Serial Number: 33090F3

Resistance: 699  $\Omega$  at 23 °C  
Temperature Compensation Range: -20 to 40 °C

This radiometer has been compared with Standard Precision Spectral Pyranometer, Serial Number 21231F3 in Eppley's Integrating Hemisphere under radiation intensities of approximately 700 watts meter<sup>-2</sup> (roughly one-half a solar constant). The adopted calibration temperature is 25 °C.

As a result of a series of comparisons, it has been found to have a sensitivity of:

$$8.52 \times 10^{-6} \text{ volts/watts meter}^{-2}$$

The calculation of this constant is based on the fact that the relationship between radiation intensity and emf is rectilinear to intensities of 1400 watts meter<sup>-2</sup>. This radiometer is linear to within  $\pm 0.5\%$  up to this intensity.

The calibration of this instrument is traceable to standard self-calibrating cavity pyrheliometers in terms of the Systems Internationale des Unites (SI units), which participated in the Ninth International Pyrheliometric Comparisons (IPC IX) at Davos, Switzerland in September-October 2000.

Useful conversion facts: 1 cal cm<sup>-2</sup> min<sup>-1</sup> = 697.3 watts meter<sup>-2</sup>  
 1 BTU/ft<sup>2</sup>-hr<sup>-1</sup> = 3.153 watts meter<sup>-2</sup>

**C-Star Calibration Sheet**

Date: 02/24/03  
Customer: National Science Foundation  
Serial Number: CST-422PR  
Job Number: 0012016  
Work Order: 005

|  |       |
|--|-------|
| $V_d = V_{\text{dark}}$                    | 0.058 |
| $V_{\text{air}} = V_{\text{out in air}}$   | 4.884 |
| $V_{\text{ref}} = V_{\text{out in water}}$ | 4.772 |
| Calibration temperature<br>of water        | 19.6  |
| Ambient temperature                        | 21.8  |

$$\% \text{ Transmission} = (V_{\text{sig}} - V_d) / (V_{\text{ref}} - V_d)$$

$$Tr = e^{-ex}$$

To solve for the attenuation coefficient  $e$  in units of  $\text{m}^{-1}$  use the following equation.

$$e = -1/x (\ln(V_{\text{sig}} - V_d) / (V_{\text{ref}} - V_d))$$

For further information on these calculations please see C-Star User's Guide, Section 2.

**Temperature Error: 0.02% F.S./°C**

**NOTES**

- $(V_d)$ —analog output of the instrument with the beam blocked. This is an instrumental offset.
- $(V_{\text{air}})$ —analog output voltage of the instrument with a cleared beam path.
- $(V_{\text{ref}})$ —analog output voltage of the instrument with clean  $\text{H}_2\text{O}$  in the path.
- **(Calibration Temperature of water)**—temperature of the clean water used to obtain  $V_{\text{ref}}$ .
- **(Ambient Temperature)**—temperature of the instrument during the calibration procedures.
- $(V_{\text{sig}})$ —measured signal voltage of the C-Star.
