Hi Joe,

I just wanted to check on the distance between the waterguns and the start of the active sections on the streamer during our cruise and on the spacings of the hydrophones.

Hi Steve. About 150 meters from guns to the middle of the first section. The streamer has one 12.5-meter section, one 25-m and two 50-meter. They all have the same number of hydrophones which is 25. The short "high frequency" section is nearest the ship, then the 25-meter section, then the two fifties.

I hope things are going OK on your current project.

Thanks. We got off to a slow, bad start, but things have settled down and are going smoothly.

Have fun on the Palmer.

Regards,

Joe.
