**I. Background and Scientific Objectives (taken from the Science Support Plan)****Cruise Overview**

MGL1408 is a 2D multichannel seismic reflection survey in the Atlantic Ocean offshore North Carolina, USA. The research aims to collect seismic data along the Eastern North American Margin (ENAM), in a community experiment with open data access. The study area covers a portion of the rifted margin of the eastern U.S., from unextended continental lithosphere onshore to mature oceanic lithosphere offshore. The data set will therefore allow scientists to investigate how the continental crust stretched and separated during the opening of the Atlantic Ocean, and what the role of magmatism was during continental breakup. The study also covers several features representing the post-rift modification of the margin by slope instability and fluid flow. The proposed survey area is shown in Figure 1.4. The principal investigators (PIs) and science party objectives will drive this program on the *R/V Langseth* with the coordination and advisement of the technical staff headed by the Office of Marine Operations (OMO) at Lamont Doherty Earth Observatory (LDEO).

The proposed 2D acquisition survey requests 4 string source arrays, one 8 km streamer deployed running lines equaling 3615 km. In addition, acquisition of refraction data with an array of 94 ocean-bottom seismometers (OBS) on four 2D lines equaling 1670km. The survey program will be dynamic and varying dependent on the seabed conditions, weather conditions, and maximizing the science objectives.

Other supporting equipment shall consist of a Kongsberg EM122 Multibeam echosounder, Knudsen 3260 3.5 kHz Sub-bottom Profiler, Bell Aerospace BGM-3 gravimeter, the RDI 75 kHz Acoustic Doppler Current Profiler (ADCP), and the Geometrics 882 magnetometers. LDEO will ensure that the equipment in use meets the manufacturer's specifications, and also meets internal quality requirements. The technicians onboard are proficient in the operations of standard systems, but are not experts. If the investigation requires expertise in any of the acquisition, including data processing, staff the science party accordingly (i.e. sail a data processor equipped with the proper equipment to complete the science objectives, including software). Other science studies will be ongoing, per scientist request and shipboard specifications.

In addition to the operations of the sound-source array, a multibeam echosounder (MBES) and a Sub-Bottom Profiler (SBP) will also be operated from the Langseth continuously throughout the survey.

The principal investigator (PI) is Harm Van Avendonk (Univ. of Texas at Austin). He will be onboard for the survey operations, as well as other scientists/students for a total of 12 scientists, 9 LDEO/contract technicians and 5 Protected Species Observers (PSOs).

**Cruise Objectives**

(Pulled from IHA application information submitted by the PI)

1) For recording marine seismic reflection data, we will use the full air-gun source of the R/V Marcus Langseth (4 air guns strings with a capacity of approximately 6,600 cubic inches) and an 8-km-long streamer. Both the air guns and streamer will be towed at approximately 9 m depth. We plan to shoot every 50 m on a grid of 2-D multichannel seismic reflection lines offshore Cape Hatteras with a total length of 3615 km. Some of the seismic lines will be dip lines from the continental shelf to the abyssal plain, while other seismic lines are oriented parallel to the coast.

2) In addition, we will acquire marine seismic refraction data with an array of 94 ocean-bottom seismometers (OBS) on four 2-D lines offshore Cape Hatteras with a total length of 1670 km. These instruments will be

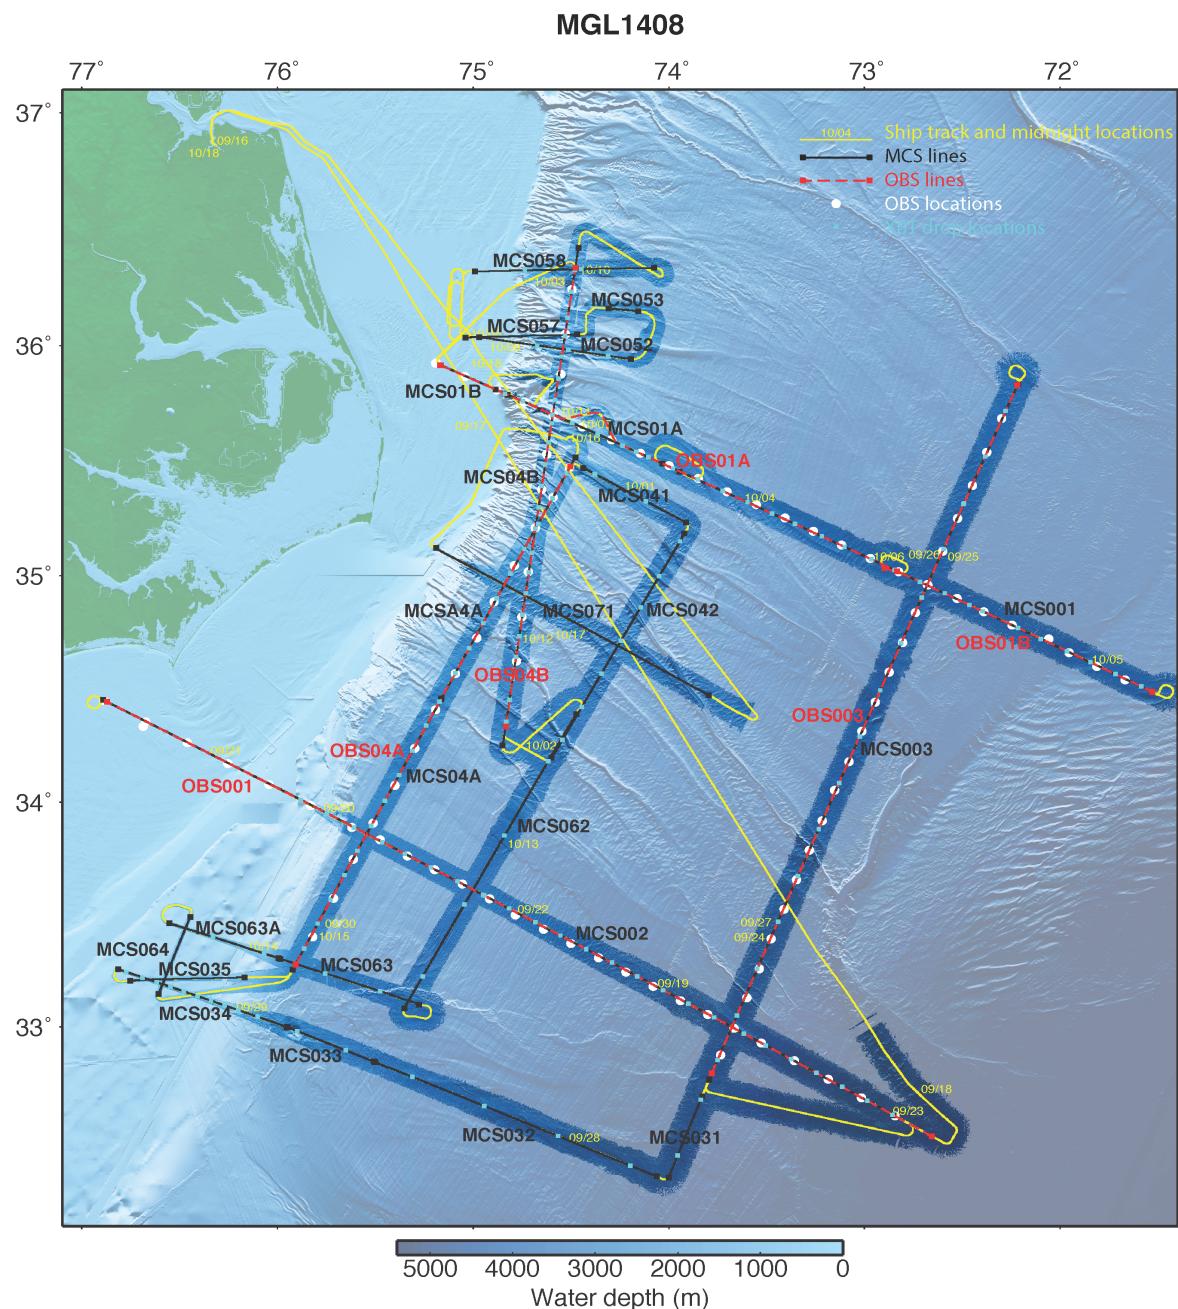

deployed and recovered from the R/V *Endeavor* over the course of 15 days. While the R/V Langseth is acquiring the multichannel seismic reflection lines, it will also use its full air-gun array on the four OBS lines, with a shot spacing of 150 m. In the spring of 2014 the R/V *Endeavor* will also deploy 30 broadband OBSs in the vicinity of Cape Hatteras for one year, but this activity will not overlap with active-source seismic cruise on the R/V Marcus Langseth.

## Science Navigation Instrumentation

### FE700 - Not in use on MGL1408

The FE700 was not in use on MGL1408.

### EM-122 Multibeam

The EM122 multibeam sonar was operated throughout the cruise. The system is designed for deeper water, and does not track ground well in less than 50m of water.

EM122 swath data is saved to the cruise archive under MGL1408/raw/multibeam. Center beam depth is recorded separately to serial log. A daily built in self test (BIST) is done on the EM122 at which time logging of data is secured. Refer to MGL1408/docs/elog for information on data degradation or data gaps (if applicable).

## Physical Configuration

The towing configuration for the air guns and streamers is detailed in the document titled *MGL1408\_Offset.xls*.

## Offsets

All antenna and in-water offset drawings are in the file *MGL1408\_Offset.xls*.

## Spectra

Spectra was used for all timing and navigation during the cruise. Spectra generated UKOOA P294 and P190 files for each MCS line acquired.

## Sprint

Sprint was used for post processing of Spectra UKOOA P294 files to produce UKOOA P190 files with improved positioning.

## **POS/MV Position and Orientation System for Marine Vessels**

POS/MV outputs data using the NMEA 0183 format at rates of up to fifty sentences per second. The following seven different sentence formats are available.

- 1. \$INGGA-Global System Position Fix Data
- 2. \$INHDT-Heading - True data
- 3. \$INVTG-Course over ground and Ground speed data
- 4. \$INGST-GPS pseudorange noise statistics
- 6. \$PRDID-Attitude data
- 7. \$INZDA-Time and date

**\$INGGA, hhmmss.sss, llll.llll, a, yyyy.yyyy, b, t, nn, v.v, x.x, M,,,c.c,rrrr\*hh**

\$INGGA-Global System Position Fix Data

Item	Definition	Value	Units
\$INGGA	Header	\$INGGA	
hhmmss.sss	UTC time of position	n/a	Hours/Minutes/Seconds.decimal. Two fixed digits of hours. Two fixed digits of minutes. Two fixed digits of seconds. Three digits for decimal fractions of a second.
llll.llll	Latitude	-90 to +90	DegreesMinutes.decimal. Two fixed digits of degrees Two fixed digits of minutes Five digits for decimal minutes.
a	N (north) or S (south)	N or S

nn	Number of satellites used in fix	0 to 32	
v.v	Horizontal dilution of precision		
x.x	Altitude of the IMU above or below the	n/a	Metres

	mean sea level. A negative value indicates below sea level.		
M	Units of measure = metres	M	
Null	Null		
Null	Null		
c.c	Age of differential corrections in records since last RTCM-104 message.	0 to 99.9	Seconds
rrr	DGPS reference station identity	0000 to 1023	
*hh	Checksum	00 - FF	
/CR/LF	Carriage return and line feed	/CR/LF	

Note that, in the case of the HDOP, IMU altitude and age of differential connections, POS/MV adds leading digits as required (i.e. if the value exceeds 9.9). Also, note that commas separate all items, including null fields. The information is valid at the location of the vessel frame.

## \$INHDT, x.x, T\*hh

\$INHDT-Heading - True data

Item	Definition	Value	Units
\$INHDT	Header	\$INHDT	
x.x	True vessel heading in the vessel frame	0 to 359.99	degrees
*hh	Checksum	n/a	
/CR/LF	Carriage return and line feed	/CR/LF	

## \$INVTG, x.x, T,, M, n.n, N, k.k, K\*hh

N	Knots	N	
k.k	Kilometres	K	
*hh	Checksum	n/a	
/CR/LF	Carriage return and line feed	/CR/LF	

Note that, in the case of the track and the speed fields, POS/MV adds the leading digits as required (i.e. if the value exceeds 9.9). Also, note that commas separate all items in the including null fields.

## \$INGST, hhmmss,sss,,smjr.smjr,smnr.smnr, o.o, l.l, y.y, a.a \*hh

y.y	Standard deviation of longitude	n/a	Metres
a.a	Standard deviation of Altitude	n/a	Metres
*hh	Checksum	n/a	
/CR/LF	Carriage return and line feed	/CR/LF	

Note that, in the case of all fields POS/MV adds leading digits as required (i.e. if the value exceeds 9.9).  
Also, note that commas separate all items, including null fields. The information is valid at the location of the vessel frame.

Note that commas separate all items

Two attitude data strings are available. The strings are identical except for the definition of roll and pitch angles. One string uses Tate-Bryant angles and the other uses TSS angles. Use the POS/MV Controller program to set the required angle convention.
