DATA FILE NAMES AND STRUCTURES	12
LKNU – KNUDSEN CHIRP 3260 SONAR	13
LWN1 - WINCHES	13
LMWX – CAMPBELL METEOROLOGICAL DAS	14
LGUV – BIOSPHERICAL GUV	15
LSEA – WET WALL FLOWS, TRANSMISSOMETER	16
UTSG – MICROTSO, THERMOSALINOGRAPH	17
LRTM – DIGITAL REMOTE TEMPERATURE	17
LDL – FLUOROMETER, WETLAB ECO	17
LGO2 – OXYGEN SYSTEM	18
LOXY – OXYGEN (PART OF PCO2 SYSTEM, SEPARATE FROM OXYGEN SYSTEM)	20
LPCO – PCO2 SYSTEM	21
LSVP - SOUND VELOCITY PROBE IN ADCP TRANSDUCER WELL	22
LADC – ADCP SPEED LOG	22
LGYR - GYROCOMPASS	23
LSEP – SEAPATH 330 GPS	23
LGAR - GARMIN GPS	27
LAIS – AIS RECEIVER	29
LMG SENSORS	30
SHIPBOARD SENSORS	30
UNDERWAY CALIBRATION SHEETS	31
ACQUISITION AND PROCESSING INFORMATION	49
ERRORS AND EVENTS	49

Introduction

The LMG data acquisition systems continuously log data from a suite of instrumentation throughout the cruise. This document describes:

- The structure and organization of the data on the distribution media
- The format and contents of the data strings
- Formulas for calculating values
- Information about the specific instruments in use during the cruise
- A log of acquisition problems and events during the cruise that may affect the data
- Scanned calibration sheets for the instruments in use during the cruise.

All the data has been archived using 'tar' and compressed using 'gzip', identified by the '.gz' extension. Tools are available on all platforms for uncompressing and de-archiving these formats: On Macintosh use the built-in Archive Utility, or tar in the terminal. On Windows operating systems use WinZip or 7Zip.

IMPORTANT: Read the last section, "Acquisition Problems and Events," for important information that may affect the processing of this data.

Archive Data Extraction

It is often useful to know exactly how an archive was produced when expanding its contents. Tar files were created using the following commands:

```
tar cvf archive-file files-to-be-archived
```

To create a list of the files in the archive:

```
tar tvf archive-file > contents.list
```

To extract the files from the archive:

```
tar xvf archive-file file(s)-to-extract
```

G-zipped files will have a “.gz” extension on the filename. These files can be decompressed after de-archiving, using:

```
gunzip filename.gz
```

Distribution Contents

ADCP data (/ADCP)

This directory contains a tar file of the ADCP system's "proc" directory, which contains a database of the averaged ping data, Matlab m-files used in processing the data, and daily graphs of the currents. For more information contact Teri Chereskin at tchereskin@ucsd.edu. The LMG1702_ADCP_raw.tar.gz archive contains the raw ADCP data.

Data collection parameters (/CAL)

Refer to the InstCoef.txt file along with the specific instrument calibration sheets in this report for information on how the RVDAS data was collected and processed.

Imagery (/Imagery)

This directory contains things such as ice imagery, isobar charts, sat imagery, wave and wind images, and weather reports.

Ocean data (/ocean)

CTD Data (/Ocean/CTD) – No CTD data collected on LMG1703

This directory contains the directory structure copied over from the CTD computer, and includes subdirectories for graphs, software configuration files, processing scripts, calibration files, raw data, and processed data.

XBT Data (/Ocean/XBT)

Contains two zip archives of XBT data generated for the Drake Transect by NOAA standard "AMVERSEAS" software.

XCTD Data (/Ocean/XCTD)

Expendable Conductivity, Temperature, and Depth (XCTD) digital probes were used to obtain water column temperature and Salinity profiles. The two files were created for each drop. .RDF files contain the raw data, and the .EDF contain the exported ascii data.

Automatically processed data (/process)

Contains automatically processed datasets and QC graphs produced by the RVDAS system

QC Plots (/process/QC.tar)

Postscript files of data stored each day on RVDAS for quality control analysis during the cruise. There are 3 types of files, named metXXX.ps, navXXX.ps, and oceanXXX.ps, where XXX represents the Julian day. Met files are a summary of the data from the meteorological instruments, Nav files are a summary of navigational data, and Ocean files are a summary of the underway seawater and bathymetry data.

Reports (/Report)

Copies of this report in MS Word and pdf formats, and scanned copies of logsheets provided by various science groups.

Additional Data (/Science)

Contains log sheets and data from the science drive of this cruise. Includes drifter and air sampling logs, imagery, Knudsen sub-bottom data, and YoYo Cam data files. YoYo Cam and OGRE images are not included in this distribution.

Instrument data (/rvdas)

Contains data collected by the suite of standard instruments on the LMG. This data is detailed later in the report

Utility programs (/Utility)

Contains utility programs to access the data on the distribution.

JGOFS Data Set

/Process/JGOF/

The JGOFS data set consists of a single file produced each day named jg<julian_day>.dat.gz where <julian_day> is the day the data was acquired. The “.gz” extension indicates that the individual files are compressed before archiving. The daily file consists of 22 separate columnar fields in text format, which are described below. The JGOFS data set is obtained primarily by applying calibrations to raw data and decimating to whole minute intervals. However, several fields are derived measurements from more than a single raw input. *Note: Null, unused, or unknown fields are filled with 9's in the JGOFS data.*

Additionally, 3 separate QC plots are generated daily by the ET using the JGOFS data set. These plots include TSG and Bathymetry data, meteorological data, and navigation data. The files are called ocean<julian_day>.ps, met<julian_day>.ps, and nav<julian_day>.ps respectively.

Field	Data	Units
01	GMT Date	dd/mm/yy
02	GMT Time	hh:mm:ss
03	Seapath Latitude (negative is South)	tt.tttt
04	Seapath Longitude (negative is West)	ggg.gggg
05	Speed Over Ground	knots
06	GPS HDOP	-
07	Gyro Heading	Degrees (azimuth)
08	Course Made Good	Degrees (azimuth)
09	Mast PAR	μEinstein's/meter2
10	Sea Surface Temperature	°C
11	Sea Surface Conductivity	siemens/meter
12	Sea Surface Salinity	PSU
13	Sea Depth (uncorrected, calc. sw soud vel. 1500 m/s) ¹	meters
14	True Wind Speed (max speed windbird)	meters/sec
15	True Wind Direction (max speed windbird)	degrees (azimuth)
16	Ambient Air Temperature	°C
17	Relative Humidity	%
18	Barometric Pressure	mBars
19	Sea Surface Fluorometry	μg/l
20	Transmissometer Voltage ²	V
21	PSP	W/m2
22	PIR	W/m2

¹Depth did not process correctly; please refer to the Knudsen logger file (lknu) for sea depth

²Correction factors to calculate % transmission can be found in the calibration sheet section and in instrument.coeff

pCO₂-merged Data Set

RVDAS

/RVDAS/

RVDAS (Research Vessel Data Acquisition System) was developed at Lamont-Doherty Earth Observatory of Columbia University and was used on the R/V Maurice Ewing for many years. It was modified extensively for use on the Nathaniel B. Palmer and her sister ship, the R/V Laurence M. Gould.

Daily data processing of the RVDAS data is performed to calibrate and convert values into useable units and as a quality-control on operation of the DAS. Raw and processed data sets from RVDAS are included in the data distribution. The tables below provide detailed information on the sensors and data. Be sure to read the “Significant Acquisition Events” section for important information about data acquisition during this cruise.

Sensors and Instruments

RVDAS data is divided into two general categories, *underway and navigation*. They can be found on the distribution media as subdirectories under the top level rvdas directory: /rvdas/uw, and /rvdas/nav. Processed oceanographic data is in the top level directory, /process. Each instrument or sensor produces a data file named with its channel ID. Each data file is g-zipped to save space on the distribution media. Not all data types are collected every day or on every cruise.

The naming convention for data files produced by the sensors and instruments is

LMG[CruiseID][ChannelID].dDDD

Example: LMG1603lmwx.d025

- The CruiseID is the numeric name of the cruise, in this case.
- The ChannelID is a 4-character code representing the system being logged. An example is “mw1,” the designation for meteorology.
- DDD is the day of year the data was collected

Underway Sensors

Meteorological Data

Measurement	String ID	Collection Status	Rate	Instrument
Air Temperature	lmwx (met)	Continuous	1/sec	RM Young 41372LC
Relative Humidity	lmwx (met)	Continuous	1/sec	RM Young 41372LC
Wind Speed / Direction	lmwx (pus,sus)	Continuous	1/sec	Gill Instruments 1390-PK-062
Barometer	lmwx (met)	Continuous	1/sec	Vaisala PTB210B
PAR	lmwx (met)	Continuous	1/sec	Biospherical Instruments QSR-240
PIR	lmwx (met)	Continuous	1/sec	Eppeley PIR
PSP	lmwx (met)	Continuous	1/sec	Eppeley PSP
GUV	lguv	Continuous	2/sec	Biospherical Instruments GUV-2511
Oxygen	lgo2	Continuous	1/min	UCAR Oxygen system

Navigational Data

Measurement	String ID	Collection Status	Rate	Instrument
Gyroscope	lgyr	Continuous	5/sec	Meridian Bridgemate Gyro
Seapath GPS	lsep	Continuous	1/sec	Seapath 330
Garmin GPS	lgar	Continuous	1/sec	Garmin 19
AIS	lais	Continuous	var	Standard Horizon GX2150

Geophysical Data

Measurement	String ID	Collection Status	Rate	Instrument
Bathymetry	lknu	Variable	Varies	Knudsen Chirp 3260
Dush-11 Winch	lwn1	Variable	20/sec	Markey DUSH-11
Dush-5 Winch	lwn1	Variable	20/sec	Markey DUSH-5
Dush-4 Winch	lwn1	Variable	20/sec	Markey DUSH-4

Oceanographic Data

Measurement	String ID	Collection Status	Rate	Instrument
Salinity	utsg	Continuous	3 sec	Seabird-45
Salinity (secondary)	tsg2	Continuous	3 sec	Seabird-45
Sea Surface Temperature	lrtm	Continuous	1 sec	Seabird-38
Fluorometry	ldfl	Continuous	1 sec	WetLabs ECO
ADCP, Speed Log	ladc	Continuous	1 sec	RD Instruments Workhorse 150
Dissolved Oxygen	loxy	Continuous	1 sec	Anderaa Optode
pCO ₂	lpcO2	Continuous	2.5 min	PCO2 System

Data File Names and Structures

RVDAS data is divided into two broad categories, **Underway** and **Navigation**. The groups are abbreviated “uw” and “nav”. Thus, these two tar files, lmguw.tar and lmgnav.tar exist under the top-level rvdas directory. The instruments are broken down as shown. Each data file is g-zipped to save space on the distribution. Not all data types are collected every day or on every cruise.

RVDAS data files are named following the convention: LMG[FileID].dDDD.

- The FileID is a 4-character code representing the system being logged, for example: lmet (for meteorology)
- DDD is the Julian day of the data collection

Underway Data	File ID	Navigation Data	File ID
Meteorological	lmwx	Gyro Compass	lgyr
Knudsen	lknu	Garmin GPS	lgar
microTSG	utsg	Seapath GPS	lsep
Sea Surface Temperature	lrtm	AIS	lais
Fluorometer	ldfl		
ADCP	ldfl		
Sound Velocity Probe	lsvp		
GUV & PUV	lguv		
PCO2 system	lpcu		
Dissolved Oxygen	loxy		
Sea Water Wall	lsea		
Winches	lwn1		

Data is received by the RVDAS system via RS-232 serial connections. The data files that comprise the rvdas data set are described below. A time tag is added to each line of data received and the data is written to disk.

```
YY+DDD:HH:MM:SS.SSS [data stream from instrument]
```

Where, YY: two-digit year, DDD: Julian Day, HH: 2 digit hours, MM: 2 digit minutes SS.SSS: seconds. All times are UTC.

The delimiters used to separate fields in the raw data files are usually spaces and commas, but other delimiters are used (:, =, @) and occasionally there is no delimiter. Care should be taken when reprocessing the data that the field separations are clearly understood. Example data strings of the loggers follow.

lknu – Knudsen Chirp 3260 Sonar

14+002:19:07:04.648 3.5kHz,4000.92,1,12.0kHz,4001.12,1,1500,-57.343073,-63.750720

¹The reference layer is an average velocity measured in a number of depth "bins". On the LMG, the bins are typically eight meters deep and bins 3-10 define the reference layer. Hence, the reference layer is the water column from 16-80 meters beneath the ship.

²The speed output is water velocity relative to the ship's hull and is therefore opposite of the actual movement of the ship. For example, if the ship's heading is due north, the North/South reference layer velocity is likely to be negative (southerly).

³The ADCP system only supplies speed over water. These fields are experimental calculations

WindObserver II™

Product Test Report

Product Tested: WindObserver II
Part Number: 1390-70-B-322
Serial Number: 1246001 - WC45
Test Date: 15/11/2012
Location: Gill Instruments Ltd

GILL ensures that quality is inherent in all aspects of the activities and ensures that compliance with BS EN ISO9001: 2008 is maintained.

This report certifies that the above instrument has been tested in accordance with Gill internal procedures

Results

Test	Limits	Passed
Still Air Test (Zero Wind Speed)	< 0.02m/s	Pass
Wind Tunnel Test (12 m/s nominal)	Pass/Fail	Pass

Generic calibration is traceable to the University of Southampton wind tunnel and instrumentation is maintained in accordance with UKAS.

All tests have been successfully completed

Barometer

VAISALA

 1 (1)
 Certificate report no. H44-14280026

CALIBRATION CERTIFICATE

Instrument PTB210B Digital Barometer
Serial number K2840001
Manufacturer Vaisala Oyj, Finland
Calibration date 10th July 2014

The above instrument was calibrated by comparing the readings of the instrument to the factory working standard of Vaisala.

The pressure readings of the factory working standard have been calibrated at an ISO/IEC 17025 accredited calibration laboratory (FINAS), Vaisala Measurement Standards Laboratory (MSL), by using MSL working standards traceable to NIST.

Calibration results

Reference hPa	Observed hPa	Correction* hPa	Acceptance limit hPa
510.0	510.0	0.0	± 0.2
610.0	610.0	0.0	± 0.2
700.0	700.0	0.0	± 0.2
810.0	810.0	0.0	± 0.2
910.0	910.0	0.0	± 0.2
950.0	950.0	0.0	± 0.2
1000.0	1000.0	0.0	± 0.2
1098.0	1098.0	0.0	± 0.2

*To obtain the true pressure, add the correction to the barometer reading.

Interpolated corrections may be used at intermediate readings of the scale of the barometer.

Page 1 of 1

Rotronic Instrument Corp certifies that the following product(s) meet their published specifications. Calibrations are carried out using instruments and standards traceable to the National Institute of Standards and Technology (NIST).

Traceable Standards:

Humidity reference: RH Systems / MBW, model number 973, s/n 06-0808

Temperature reference: Hart Thermometer, model number 1529-R, s/n A38490 PRT Model 5614, s/n 640981

*PAR for mast***Biospherical Instruments Inc.****CALIBRATION CERTIFICATE**

Calibration Date	4/15/2016
Model Number	QSR240
Serial Number	6394
Operator	TPC
Standard Lamp	V-035(3/4/15)
Probe Excitation Voltage Range:	6 to 18 VDC(+)
Output Polarity:	Positive

Probe Conditions at Calibration (in air):

Calibration Voltage:	6 VDC(+)
Probe Current:	4.0 mA

Probe Output Voltage:

Probe Illuminated	118.4 mV
Probe Dark	0.3 mV
Probe Net Response	118.2 mV
RG780	0.3 mV

Corrected Lamp Output:Output in Air (same condition as calibration):

1.032E+16	quanta/cm ² sec
0.017133	uE/cm ² sec

Calibration Scale Factor:

(To calculate irradiance, divide the net voltage reading in Volts by this value.)

Dry:	1.1455E-17	V/(quanta/cm ² sec)
	6.8984E+00	V/(uE/cm ² sec)

Notes:

1. Annual calibration is recommended.
2. Calibration is performed using a Standard of Spectral Irradiance traceable to the National Institute of Standards and Technology (NIST).
3. The collector should be cleaned frequently with alcohol.
4. Calibration was performed with customer cable, when available.

STANDARDIZATION OF EPPLEY PRECISION INFRARED RADIOMETER Model PIR

Serial Number: 32031F3

Resistance: 709 Ω at 23°C

Temperature Compensation Range: -20° to +40°C

This pyregeometer has been compared against Eppley's Blackbody Calibration System under radiation intensities of approximately 200 watts meter⁻² and an average ambient temperature of 23°C as measured by Standard Omega Temperature Probe, RTD#1.

As a result of a series of comparisons, it has been found to have a sensitivity of:

$$3.87 \times 10^{-6} \text{ volts/watts meter}^{-2}$$

The calculation of this constant is based on the fact that the relationship between radiation intensity and emf is rectilinear to intensities of 700 watts meter⁻². This radiometer is linear to within $\pm 1.0\%$ up to this intensity.

The calibration of this instrument is traceable to the International Practical Temperature Scale (IPTS) through a precision low-temperature blackbody.

Eppley recommends a minimum calibration cycle of five (5) years but encourages annual calibrations for highest measurement accuracy. Unless otherwise stated in the remarks section below or on the Sales Order, the results are "AS FOUND / AS LEFT".

Shipped to: NSF/Lockheed Martin
Port Hueneme, CA

Date of Test: March 10, 2016

Calibration Certificate

Instrument: Precision Spectral Pyranometer, Model PSP, Serial Number 31701F3

Procedure: This pyranometer was compared in Eppley's Integrating Hemisphere according to procedures described in *ISO 9847 Section 5.3.1* and Technical Procedure, TP01 of The Eppley Laboratory, Inc.'s Quality Assurance Manual on Calibrations.

Transfer Standard: Eppley Standard Precision Pyranometer, Model SPP, Serial Number 37501F3

Results: **Sensitivity:** $S = 7.58 \mu V / W m^{-2}$
Uncertainty: $U_{95} = \pm 0.91\%$ (95% confidence level, $k=2$)
Resistance: 674 Ω at 23°C

Date of Test: March 18, 2016

Traceability: This calibration is traceable to the World Radiation Reference (WRR) through comparisons with Eppley's AHF standard self-calibrating cavity pyrheliometers which participated in the Eleventh International Pyrheliometric Comparisons (IPC XI) at Davos, Switzerland in September-October 2010. Unless otherwise stated in the remarks section below or on the Sales Order, the results of this calibration are "AS FOUND / AS LEFT".

Due Date: Eppley recommends a minimum calibration cycle of five (5) years but encourages annual calibrations for highest measurement accuracy.

Customer: NSF/Lockheed Martin
Port Hueneme, CA

Signatures:  In Charge of Test:  Reviewed by:

Eppley SO: 64669

Date of Certificate: March 18, 2016

Remarks: Sensitivity before Repainting Element = $8.11 \mu V / W m^{-2}$

System Calibration Certificate

THE INSTRUMENTS REFERENCED BELOW WERE FACTORY TESTED AND CALIBRATED BY

BIOSPHERICAL INSTRUMENTS INC.

5340 Riley Street

San Diego, California 92110 USA

Instruments: GUV-2511 No 25110805126

Optical Calibrations:

NIST Traceability. For wavelengths longer than 313 nm, the specific instruments cited here were calibrated using a 1000W FEL #V-033 (3/3/15) following procedures and standards traceable to NIST Standard of Spectral Irradiance **F616**. Traceability paths and all procedures for all calibrated lamps and associated apparatus (shunts, power supplies, DMMs, etc) are maintained following calibration methodologies per National Bureau of Standards (US) (NBS) Special Publication 250-20 Spectral Irradiance Calibrations (1987) and NBS Publication 594-13 Optical Radiation Measurements: The 1973 Scale of Spectral Irradiance (1977).

Solar Calibrations. Lamp calibrations are problematic for solar UV measurements (wavelengths below 320 nm) because the solar spectrum is radically different from the lamp spectrum and changes greatly as a function of wavelength. Solar calibrations are achieved through direct comparison with measurements of a high resolution scanning spectroradiometer in San Diego (SUV-100), which is part of the National Science Foundation's UV Monitoring Network. The SUV-100 instrument has a bandwidth of 1 nm. Calibrated filter radiometer data therefore report spectral irradiance at the channel's nominal wavelengths with a bandwidth of 1 nm. Solar calibrations are typically accurate to within $\pm 10\%$ for solar zenith angles smaller than 75° . At larger solar zenith angles, UV channels have a greater uncertainty due to the rapid change of the solar UV spectrum.

Note that this certificate contains a subset of the information delivered in the calibration database **25110805126v7.mdb**. This database is required for operation of this system using Biospherical Instruments Inc.'s Logger® software.

C-Star Calibration

Date	8.21.15	S/N#	CST-407DR	Pathlength	25cm
		Analog output	Digital output		
V_d		0.004 V	0 counts		
V_{air}		4.821 V	15832 counts		
V_{ref}		4.699 V	15433 counts		
Temperature of calibration water				24.3 °C	
Ambient temperature during calibration				22.8 °C	

Relationship of transmittance (Tr) to beam attenuation coefficient (c), and pathlength (x , in meters): $Tr = e^{-cx}$

To determine beam transmittance: $Tr = (V_{sig} - V_{dark}) / (V_{ref} - V_{dark})$

To determine beam attenuation coefficient: $c = -1/x * \ln(Tr)$

V_d Meter output with the beam blocked. This is the offset.

V_{air} Meter output in air with a clear beam path.

V_{ref} Meter output with clean water in the path.

Temperature of calibration water: temperature of clean water used to obtain V_{ref} .

Ambient temperature: meter temperature in air during the calibration.

V_{sig} Measured signal output of meter.

ECO Chlorophyll Fluorometer Characterization Sheet

Date: 6/22/2015

S/N: FLRTD-1735

Chlorophyll concentration expressed in µg/l can be derived using the equation:

$$\text{CHL } (\mu\text{g/l}) = \text{Scale Factor} * (\text{Output} - \text{Dark Counts})$$

	Analog Range 1	Analog Range 2	Analog Range 4 (default)	Digital
Dark Counts	0.054	0.025	0.010 V	48 counts
Scale Factor (SF)	6	13	25 µg/V	0.0076 µg/count
Maximum Output	4.99	4.99	4.99 V	16380 counts
Resolution	0.8	0.8	0.8 mV	1.0 counts

Ambient temperature during characterization

21.0 °C

Analog Range: 1 (most sensitive, 0–4,000 counts), 2 (midrange, 0–8,000 counts), 4 (entire range, 0–16,000 counts).

Dark Counts: Signal output of the meter in clean water with black tape over detector.

SF: Determined using the following equation: $SF = x \div (\text{output} - \text{dark counts})$, where x is the concentration of the solution used during instrument characterization. SF is used to derive instrument output concentration from the raw signal output of the fluorometer.

Maximum Output: Maximum signal output the fluorometer is capable of.

Resolution: Standard deviation of 1 minute of collected data.

The relationship between fluorescence and chlorophyll-a concentrations *in-situ* is highly variable. The scale factor listed on this document was determined using a mono-culture of phytoplankton (*Thalassiosira weissflogii*). The population was assumed to be reasonably healthy and the concentration was determined by using the absorption method. To accurately determine chlorophyll concentration using a fluorometer, you must perform secondary measurements on the populations of interest. This is typically done using extraction-based measurement techniques on discrete samples. For additional information on determining chlorophyll concentration see "Standard Methods for the Examination of Water and Wastewater" part 10200 H, published jointly by the American Public Health Association, American Water Works Association, and the Water Environment Federation.
