**SEPTEMBER 22, 1996 - OCTOBER 11, 1996**

## REPORTE DEL VIAJE

### A. TITULO DEL PROYECTO:

Estructura del cráter de impacto del Chicxulub, Yucatán (Méjico).

### B. SUMARIO DE LOS OBJETIVOS DEL VIAJE

El propósito primario de este proyecto fue recoger información sísmica a lo largo de dos líneas (A,B) que cruzan el borde costero norte del cráter de impacto sepultado KT del Chicxulub en Yucatán (Méjico). Los datos fueron recolectados utilizando una serie de Sismógrafos de fondo oceánico (OBSSs) pertenecientes a la Universidad de Texas (Austin) los cuales fueron desplegados a lo largo de las dos líneas con un espaciamiento de 10 o de 20 Km. El objetivo fundamental fue delimitar la estructura profunda de la corteza crateriana. La información recopilada complementará los datos de reflexión sísmica recolectados por el buque de sísmico GECO Sigma a lo largo de tres líneas (A,B,C) bajo la dirección de el Sindicato de Perfilamiento de Reflexión de las Instituciones Británicas (BIRPS) (Reino Unido). El GECO Sigma proporcionó la fuente de energía para el experimento. Los datos sísmicos (refracción y reflexión de apertura amplia) fueron también recolectados utilizando una serie de sismógrafos de tierra instalados en la línea costera por el Imperial College (Colegio Imperial) de Londres (Reino Unido). Se instalaron instrumentos para la obtención de datos magnéticos y de gravedad a bordo del R/V Longhorn por la Geological Survey (Inspección Geológica) de Canadá, y dichos datos fueron recolectados continuamente a lo largo de todo el viaje durante períodos de tiempo sin desplegar ni reponer los OBSSs. Algunos observadores de México también participaron en el viaje. Se trataba de un programa internacional con participación de México, El Reino Unido, Estados Unidos y Canadá. La colaboración estadounidense fue posible gracias a una donación a la Universidad de Texas (Austin) patrocinio de la Fundación Nacional para la Ciencia (NSF).

### C. VIAJE Y DATOS

Buque R/V Longhorn 676; 22 de septiembre de 1996 – 11 de octubre de 1996.

### D. PLAN DEL R/V LONGHORN

Véase documento adjunto nº 1.

### E. TRIPULACION DE LOS BUQUES:

Noé Cantú, Capitán; Hayden Abel, Piloto; Randy Pritchard, Piloto; Charles Rowe, Técnico; y Frank Walker, Cocinero.

**F. DESTACAMIENTO CIENTIFICO:**

Richard T. Buffler, Codirector Científico, Universidad de Texas, Instituto de Geofísica, Austin, Texas; Yosio Nakamura, Codirector Científico, Universidad de Texas, Instituto de Geofísica, Austin, Texas; Ben Yates, Universidad de Texas, Instituto de Geofísica, Austin, Texas; John Brittan, Imperial College, Londres, RU; Roy Cooper, Inspección Geodésica de Canadá, Ottawa, Canadá (22/9/96-8/10/96); Carlos Ruiz, PEMEX, Cd. del Carmen, México (25/9/96-1/10/96); Adilce Flores, UNAM, México D.F., México (22/9/96-1/10/96).

**G. SUMARIO DEL VIAJE:**

22/9/96 – Salida de Port Aransas, Texas a las 14:12 (todas horas locales). Rumbo a Progreso, México. Se recogieron datos continuamente a lo largo de todo el viaje (véase Documento adjunto nº 2). Se recopilaron datos a bordo constantemente durante todo el viaje (situación, velocidad, rumbo, profundidad, temperatura del aire y del mar, salinidad, presión barométrica, velocidad del viento y dirección, Véanse Documentos adjuntos 3-5).

23/9/96 – Rumbo a Progreso. Se puso en funcionamiento el magnetómetro a las 10:35.

24/9/96 – Se prosiguió rumbo a Progreso. A las 17:40 se descubrió extravío del magnetómetro. Había sido arrancado de el extremo del cable, las razones se desconocen. Sin repuesto disponible.

25/9/96 – A las 07:42 detención frente a la costa de Progreso, cerca de la Estación OBS 10 en la intersección de las líneas sísmicas A y C, con objeto de determinar la temperatura del agua del mar, la salinidad y la velocidad para el GECO Sigma, el buque geofísico que recolectaba datos de reflexión sísmica y suministraba la fuente de energía sísmica para el proyecto. Estos datos serían usados para ayudar a equilibrar el cable sísmico (Estación CDT nº 1; véase documento adjunto nº 6). Llegada a Progreso, Puerto Yukalpetén a las 09:30. Paso de aduana y obtención de combustible. Contacto con el buque geofísico GECO Sigma, el cual estaba amarrado en el muelle principal de Progreso. Se acordó intentar establecer contacto entre los dos cada seis horas. Se discutió el plan de viaje con Mike Warner (Imperial College, Reino Unido), quien estaba dirigiendo el experimento sísmico en tierra, y con Alan Hildebrand y Mark Pilkington (Inspección Geológica de Canadá), quienes se encontraban dirigiendo análisis de gravedad en el puerto e inmediaciones costeras. Salida a las 16:12, en ruta a la estación OBS 1. Se continuó recolectando datos gravitatorios.

26/9/96 – Detención a las 01:20 y recogida del segundo perfil de temperatura del agua

marina, salinidad y velocidad en la Estación CTD 2 (Véase Documento nº 7). Despliegue del primer OBS en la Estación 1 a las 02:24. Continuación del despliegue de OBSs durante todo el día en las Estaciones 2-25 a lo largo de la línea este-oeste designada como línea A. Último OBS en la Estación 25 desplegado a las 23:49. (Véanse hojas de sumario de OBS para recabar detalles sobre horario de despliegue, situación, datos adquiridos, e información varía sobre cada OBS en cada una de las estaciones - Documentos adjuntos 8-11). Eclipse lunar total - noche agradable.

27/9/96 - De vuelta rumbo al oeste a lo largo de la Línea A para recoger largo perfil gravitatorio. Detención a mitad de camino a lo largo de la línea para desplegar OBS en la Estación 34 inmediatamente afuera de las inmediaciones costeras de Progreso siguiendo la trayectoria de la línea sísmica C. El OBS de la Estación 20 no fue desplegado y el instrumento fue utilizado en la Estación 34. Continuación del análisis de gravedad a lo largo de la línea A. Se sobrepasó la línea de "disparo" A del GECO Sigma de oeste a este aproximadamente a las 18:45 (Véase Documento adjunto 11 para localización de las líneas sísmicas A,B, y C, y Documento adjunto 12 para sumario de líneas sísmicas).

28/9/96 - Continuación del análisis de gravedad en la parte oeste del área de estudio.

29/9/96 - Se comenzó el reposicionamiento de OBSs en las Estaciones 1-8 a las 06:00, continuando hasta las 17:46. Todos los OBSs fueron recuperados. El OBS nº 5 no se recuperó hasta unos diez minutos más tarde. Se descubrió una mala conexión en la batería CPU. El sistema de soporte hubo de ser utilizado para desplegar el OBS. Ningún dato fue recogido. OBSs 1-8 reprogramados para convertirse en OBSs 26-33. A las 21:31 OBS fue desplegado en Estación 35 en las inmediaciones costeras de Progreso a lo largo de la trayectoria portuaria de la Línea B. OBS de repuesto usado para la Estación 35. OBS 26 desplegado a las 23:14. GECO Sigma informó de problemas de "disparo" y rompió la línea por un círculo de 3 horas para solucionar el problema (véase Documento adjunto 12).

30/9/96 - Continuación del despliegue de OBSs en las Estaciones 27 a 33 (07:39). Continuación de recogida de datos gravitatorios.

1/10/96 - Piloto a bordo a las 09:30. Llegada a Progreso (Puerto Yukalpetén) a las 10:10 para contacto oficial con la aduana mexicana y repostaje. John Halpenny de Canadá estableció contacto con la lancha para discutir el programa de gravedad. Había manejado a Yucatán desde Pt. Aransas tras ayudar a Roy Cooper con la instalación de instrumental

gravitatorio en el Longhorn durante una semana, previamente al viaje. La mayoría de la tripulación y el destacamento científico al completo visitaron las oficinas de aduanas en Progreso para mostrar pasaportes y firmar formularios. Carlos Ruiz y Adilce Flores desembarcaron para unirse al equipo de gravedad y al sísmico a fin de saber del aspecto del proyecto. Partida de Port Yukalpeten a las 18:40. Piloto desconectado a las 18:45. Continuación del análisis gravitatorio.

2/10/96 - Continuación del análisis de gravedad en la parte oeste del área de estudio.

3/10/96 - Continuación del análisis de gravedad en la parte este del área de estudio.

4/10/96 - Continuación del análisis de gravedad en la parte este del área de estudio.

5/10/96 - Continuación del análisis de gravedad en la parte este del área de estudio.

6/10/96 - A las 08:15 comienzo de la recuperación de OBSs a lo largo de la Línea A empezando con OBS nº 25 (extremo este de la línea) y prosiguiendo hacia el oeste. A las 14:21 El juego de lápiz y pluma de Yosio se perdió en la Estación nº 22. Continuación de la recuperación de OBSs nº 24-15. Fifi (OBS nº 18, única mujer a cargo de un OBS) recuperada a las 19:23.

7/10/96 - Continuación de la recuperación de OBSs a lo largo de la Línea A (números 14-9) y a continuación comienzo de la recuperación de OBSs a lo largo de la Línea B (números 26-33). El OBS nº 27 fue localizado a las 09:15, aunque fue rápidamente perdido de vista debido a los fuertes vientos. No había radiofaro en funcionamiento para poder seguirle la pista. Área revisada hasta las 09:45 antes de tener que partir para la próxima recogida. OBS 27 se declaró como extraviado. Hacia la tarde y al comienzo de la noche, se experimentaron fuertes vientos (30-40 nudos, con rachas por encima de los 40) y alta mar (8-10 pies, con olas de más de 12 pies). Esto era debido a efectos meridionales de la tormenta tropical Josephine que se había formado en el noroeste del Golfo y se estaba moviendo en dirección noreste por el norte del Golfo (véanse mapas del tiempo - Documento adjunto 13). Velocidad del buque severamente reducida a 4-5 nudos. Retraso a las estaciones 31 y 32, aunque se pudieron recobrar OBSs utilizando radiofaros. A causa del retraso general, peligro de marejada para buque y tripulación durante recuperación nocturna, además era necesario llegar a las Estaciones 34 y 35 a tiempo, se decidió abandonar el intento de llegar a la Estación 33. Se intentaría encontrar OBS después de

dejar puerto mañana. Partida hacia la estación 34 a las 17:45.

8/10/96 – De camino a OBS 34, el piloto Abel avistó luz intermitente aproximadamente a las 03:15. Tras investigación más profusa se descubrió que la luz procedía del OBS extraviado. OBS 27 recuperado a las 03:50. Se comprobó que el interruptor del faro había sido de algún modo desconectado? A las 05:52 se recuperó OBS 34. A las 07:00 un remolcador de Progreso llegó con un equipo de filmación de TV-UNAM, para filmar las operaciones con los OBSs como parte de un programa que estaban haciendo sobre el cráter KT del Chicxulub y el experimento sísmico. Todos a bordo para las 07:12, incluyendo a cinco de TV-UNAM además de científicos de la UNAM, Instituto de Geofísica (Jaime Urrutia Chávez). Filmaron la recuperación del OBS 35 a las 07:24 y otras actividades en el barco. Conexión del piloto a las 08:56. Fondeado en Yukalpetén a las 09:25. Encuentro con Alan Hildebrand, Mark Pilkington y John Kalpenny de Canadá, quienes estaban haciendo análisis de gravedad como parte del experimento global de Chicxulub. TV-UNAM desembarcó. Roy Cooper y todo el instrumental de gravedad abandonó el buque para hacer un análisis junto al puerto utilizando un pequeño bote. Salida de Puerto Yukalpetén a las 14:16. En camino al punto dónde se había calculado que el OBS 33 habría sido arrastrado, aproximadamente a 24 millas al sur de su localización inicial. Trayecto hacia el norte de cinco millas, luego hacia el este, luego hacia el norte, y después de nuevo hacia el oeste a 10 millas al norte del punto de partida.

9/10/96 – Continuación de la búsqueda del OBS 33. No se escuchó ninguna señal. Se abandonó la búsqueda a la 01:30 aproximadamente y se prosiguió hacia el noroeste hacia Port Aransas con objeto de llegar el viernes, 11/10/96. Rumbo a Pt. Aransas.

10/10/96 – Rumbo a Pt. Aransas. Se envió boletín a las autoridades mexicanas vía Pt. Aransas (UTMSI) así como a un agente a Progreso para alertar a todas las áreas costeras acerca del OBS extraviado. Se comprobó el estado de todos los datos sísmicos encontrados y grabados que habían proporcionado buena información de todos los canales de cada uno de los aparatos de OBS que recuperaban datos (32 de las 34 estaciones; el nº 5 fue el único en no recoger ninguna información y el nº 33 se extravió).

11/10/96 – Se continuó rumbo a Pt. Aransas. Llegada a Pt. Aransas (Texas) a las 13:03. Paso de aduanas a las 14:00 aproximadamente.

## H. SUMARIO DEL BUQUE E INFORMACION RECOGIDA

### 1. R/V LONGHORN

Documento adjunto nº 1 – Sumario de especificaciones.

### 2. DATOS GRAVITATORIOS

Documento adjunto nº 2 – Trazado mostrando lugares donde fueron recolectados datos de gravedad durante el viaje.

3. DATOS DE A BORDO – tiempo, situación (latitud y longitud), velocidad, rumbo, distancia recorrida, profundidad, temperatura del aire, temperatura del mar, salinidad, presión barométrica, velocidad del viento y dirección.

Documento adjunto nº 3 – Registro científico diario; tabla con lectura de cada hora y anotación de posiciones científicas, como por ejemplo, despliegues de OBS.

Documento adjunto nº 4 – Sumario del día.

Documento adjunto nº 5 – Gráficas de datos diarios y trayecto del buque.

4. ESTACIONES CTD – Temperatura, Salinidad, velocidad vs. profundidad.

Documento adjunto nº 6 – Datos de la Estación CTD nº 1 – tablas y varias gráficas.

Documento adjunto nº 7 – Datos de la Estación CTD nº 2 – tablas y varias gráficas.

### 5. DATOS DE OBS

Documento adjunto nº 8 – Sumario de datos sobre OBSs utilizados. Posición de las Estaciones OBS 1-35, y datos recogidos.

Documento adjunto nº 9 – Tabla mostrando línea de tiempo (OBS vs. tiempo/fecha).

Documento adjunto nº 10 – Sumario de parámetros de grabación de los OBSs.

Documento adjunto nº 11 – Mapa mostrando las posiciones de los OBSs y las líneas sísmicas trazadas por el GECO Sigma.

### 6. DATOS SISMICOS

Documento adjunto nº 12 – Sumario de tres líneas sísmicas (A,B,C) trazadas por el GECO Sigma (véase documento adjunto para posiciones de las líneas).

### 7. METEOROLOGIA

Documento adjunto nº 13 – Mapas meteorológicos mostrando la tormenta tropical Josephine en el norte del Golfo de México.

## CRUISE REPORT

### A. PROJECT TITLE:

Structure of the Chicxulub Impact Crater, Yucatan, Gulf of Mexico

### B. SUMMARY OF CRUISE OBJECTIVES

The primary purpose of this project was to collect seismic (wide-angle reflection and refraction) data along two lines (A,B) that cross the northern offshore part of the buried Chicxulub KT Impact Crater, Yucatan, Mexico. Data were collected using a series of University of Texas Ocean Bottom Seismographs (OBSs) deployed along the two lines at a spacing of either 10 or 20 km. The overall goal was to image the deep crustal structure of the crater. The data collected will complement seismic reflection data collected by the seismic vessel GECO Sigma along three lines (A,B,C) under the direction of the British Institutions Reflection Profiling Syndicate (BIRPS ) (UK). The GECO Sigma provided the energy source for the experiment. Seismic data (wide-angle reflection and refraction) also were collected using a series of land seismographs installed onshore by Imperial College of London (UK). Instruments for collecting gravity and magnetic data were installed on the R/V Longhorn by the Geological Survey of Canada, and these data were collected continuously throughout the cruise during times not deploying or recovering OBSs. Observers from Mexico also participated on the cruise. This was an international program involving Mexico, the United Kingdom, the United States, and Canada. The US involvement was sponsored by a grant to the University of Texas at Austin from the National Science Foundation.

**C. CRUISE AND DATES:**

Cruise R/V Longhorn 676; September 22, 1996 - October 11, 1996

**D. R/V LONGHORN SPECIFICATIONS**

See Attachment No. 1

**E. SHIPS CREW:**

Noe Cantu, Captain; Hayden Abel, Mate; Randy Pritchard, Mate; Charles Rowe, Technician, and Frank Walker, Cook

**F. SCIENTIFIC PARTY:**

Richard T. Buffler, Co-chief Scientist, University of Texas, Institute for Geophysics, Austin, Texas; Yosio Nakamura, Co-chief Scientist, University of Texas, Institute for Geophysics, Austin, Texas; Ben Yates, University of Texas, Institute for Geophysics, Austin, Texas; John Brittan, Imperial College, London, UK; Roy Cooper, Geodetic Survey of Canada, Ottawa, Canada (9/22/96 - 10/8/96); Carlos Ruiz, PEMEX, Cd. del Carmen, Mexico (9/25/96 - 10/1/96); Adilce Flores, UNAM, Mexico City, Mexico (9/22/96 - 10/1/96)

**G. CRUISE SUMMARY:**

9/22/96 - Departed Pt. Aransas, Texas at 1412 (all times local). Transiting to Progreso, Mexico. Collected gravity data continuously throughout entire cruise (see Attachment No. 2). Collected various shipboard data continuously throughout the cruise (location, speed, course, depth, air and sea temperature, salinity, barometric pressure, wind speed and vector, see Attachments 3-5).

9/23/96 - Transiting to Progreso. Deployed magnetometer at 1035.

9/24/96 - Continuing transit to Progreso. At 1740 discovered magnetometer missing. It had twisted off from end of cable, reasons unknown. No replacement available.

9/25/96 - At 0742 stopped just offshore Progreso, near OBS Station 10 at intersection of seismic lines A and C, to collect profile of seawater temperature, salinity and velocity for GECO Sigma, the geophysical ship that would be collecting seismic reflection data and providing the seismic energy source for the project. These data would be used to help balance the seismic streamer (CTD Station No. 1; see Attachment No. 6). Arrived Progreso, Puerto Yukalpeten at 0930. Cleared customs and obtained fuel. In contact with geophysical ship GECO Sigma, which was docked at main pier at Progreso. Arranged to try to make contact each other every 6 hours. Discussed cruise plan with Mike Warner (Imperial College, UK), who were conducting onland seismic experiment, and Alan Hildebrand and Mark Pilkington (Geol. Survey of Canada), who were conducting the gravity surveys onshore and offshore. Departed at 1612, enroute to OBS Station 1. Continued to collect gravity data.

9/26/96 - Stopped at 0120 and collected second profile of seawater temperature, salinity and velocity at CTD Station 2 (see Attachment No. 7). Deployed first OBS at Station 1 at 0214. Continued to deploy OBSs all day at Stations 2-25 along east-west line designated as Line A. Final OBS at Station 25 deployed at 2349. (See attached OBS summary sheets for details of times of deployment, locations, data acquired, and various information about each

OBS at each station - Attachments 8-11). Full eclipse of the moon - beautiful night.

9/27/96 - Transited back west along Line A to collect long gravity profile. Stopped half-way along line to deploy OBS at Station 34 just offshore from Progreso along extension of seismic line C. OBS at Station 20 was not deployed and instrument was used at Station 34. Continued gravity survey along line A. Passed GECO Sigma shooting Line A from west to east at approximately 1845 (see Attachment 11 for location of seismic lines A,B, and C, and Attachment 12 for summary of seismic lines).

9/28/96 - Continued gravity survey in western part of study area

9/29/96 - Began recovery of OBSs at Stations 1-8 at 0600, continuing through 1746. All OBSs recovered. OBS No. 5 late coming up by about 10 minutes. Discovered bad CPU battery connection. Backup system used to release OBS. No data recorded. OBSs 1-8 re-programmed to become OBSs 26-33. At 2131 deployed OBS at Station 35 offshore Progreso along onshore extension of line B. Used spare OBS for Station 35. Deployed OBS 26 at 2314. GECO Sigma reported gun problems and broke line for 3 hour circle to fix problem (see Attachment 12).

9/30/96 - Continued deployment of OBSs at Stations 27 (0029) through 33 (0739). Continued to collect gravity data.

10/1/96 - Pilot on board at 0930. Arrive Progreso (Port Yukalpeten) at 1010 for official contact with Mexican immigration and for fuel. John Halpenny from

Canada met boat to discuss gravity program. He had driven to Yucatan from Pt. Aransas after helping Roy Cooper with installation of gravity instruments on Longhorn for one week prior to cruise. Most crew and entire scientific party visited immigration office in Progreso to show passports and sign forms. Carlos Ruiz and Adilce Flores disembarked from ship to join onshore seismic and gravity parties to learn about that aspect of project. Leave Port Yukalpeten at 1840. Pilot off at 1845. Continue gravity survey.

10/2/96 - Continue gravity survey in western part of study area.

10/3/96 - Continue gravity survey in eastern part of study area.

10/4/96 - Continue gravity survey in eastern part of study area.

10/5/96 - Continue gravity survey in eastern part of study area.

10/6/96 - At 0815 begin recovery of OBS's along Line A starting with OBS No. 25 (east end of line) and going west. At 1421 deployed Yosio's pen and pencil set at OBS station No. 22. Continued recovery of OBS No. 24-15. Fifi (OBS No. 18, only female OBS) recovered at 1923.

10/7/96 - Continued recovery of OBSs along Line A (Nos. 14-9) and then began recovery of OBSs along Line B (Nos. 26-33). OBS 27 was sited at 0915, but it was quickly lost from sight due to high winds. There was no radio beacon active to track it. Searched area until 0945 before had to leave for next pickup. OBS 27 declared lost. Toward afternoon and into evening, experienced high winds (30-40 kts, with gusts over 40) and high seas (8-10 feet, with some waves

up to 12 feet). This was southern effects of Tropical Storm Josephine that had developed in northwestern Gulf and was moving northeast across northern Gulf ( see weather maps - Attachment 13). Ship's speed severely reduced to 4-5kts. Late to stations 31 and 32, but were able to recover OBS using radio beacons. Because so far behind schedule, danger to ship and crew from heavy seas during night recovery, plus need to arrive at Stations 34 and 35 on time, decided to abandon trying to reach Station 33. Would try to find OBS after leaving port tomorrow. Left for station 34 at 1745.

10/8/96 - During transit to OBS 34, Mate Abel sighted strobe light at approximately 0315. Upon further investigation discovered strobe to be from lost OBS 27. Recovered OBS 27 at 0350. Found beacon switch somehow had been switched off? At 0552 recovered OBS 34. At 0700 a tugboat from Progreso arrived with film crew from TV-UNAM, to film OBS operations as part of a program they were doing on the Chicxulub KT crater and the seismic experiment. All on board by 0712, including five from TV- UNAM plus two scientists from UNAM, Instituto Geofisica (Jaime Urrutchia sp? ? Chavez ). They filmed recovery of OBS 35 at 0724 plus other activities on ship. Picked up pilot at 0856. Docked at Yukalpeten at 0925. Met by Alan Hildedbrand, Mark Pilkington and John Halpenny from Canada, who were doing gravity surveys as part of the overall Chicxulub experiment. TV-UNAM disembarked. Roy Cooper and all the gravity instrumentation left the ship to do nearshore survey using small vessel. Departed Port Yukalpeten at 1406. Transited to location where predicted OBS 33 might have drifted, approximately 24 miles south of original location. Arrived about 2000 to begin search using radio direction finders. Made a transit north for five miles, then

headed east, then north, and then back west to 10 miles north of starting point.

10/9/96 - Continued search for OBS 33. Heard no signals. Abandoned search at approximately 0130 and headed northwest for Pt. Aransas in order to arrive by Friday, 10/11/96. Transiting to Pt. Aransas.

10/10/96 - Transiting to Pt. Aransas. Sent bulletin to Mexican authorities via Pt. Aransas (UTMSI) and agent in Progreso to alert all coastal areas about lost OBS. Checked status of all seismic data recorded and found that had obtained good data on all channels from each OBS instrument that recovered data (32 out of 34 stations; only No. 5 recorded no data and No. 33 was lost).

10/11/96 - Continued transiting to Pt. Aransas. Arrived Pt. Aransas, TX at 1303. Cleared customs and immigrations at approximately 1400.

## H. SUMMARY OF SHIP AND DATA COLLECTED

### 1. R/V LONGHORN

**Attachment No. 1** - Summary of specifications.

### 2. GRAVITY DATA

**Attachment No. 2** - Track plot showing location of gravity data collected during cruise.

3. SHIPBOARD DATA - time, location (latitude and longitude), speed, course, distance traveled, depth, air temperature, sea temperature, salinity, barometric pressure, wind speed and vector

**Attachment No. 3** - Daily science log; table with readings every hour plus science locations noted, ie, OBS deployments.

**Attachment No. 4** - Daily summary.

**Attachment No. 5** - Graphs of daily data and plot of ship track.

4. CTD STATIONS - Temperature, salinity, velocity vs. depth.

**Attachment No. 6** - Data from CTD Station No. 1 - tables plus various graphs.

**Attachment No. 7** - Data from CTD Station No. 2 - tables plus various graphs.

## 5. OBS DATA

**Attachment No. 8** - Summary of data on OBSs used, location of OBS stations 1-35, and data acquired.

**Attachment No. 9** - Chart showing OBS timeline (OBS vs. time/date).

**Attachment No. 10** - Summary of OBS recording parameters.

**Attachment No. 11** - Map showing OBS locations and seismic lines shot by GECO Sigma.

## 6. SEISMIC DATA

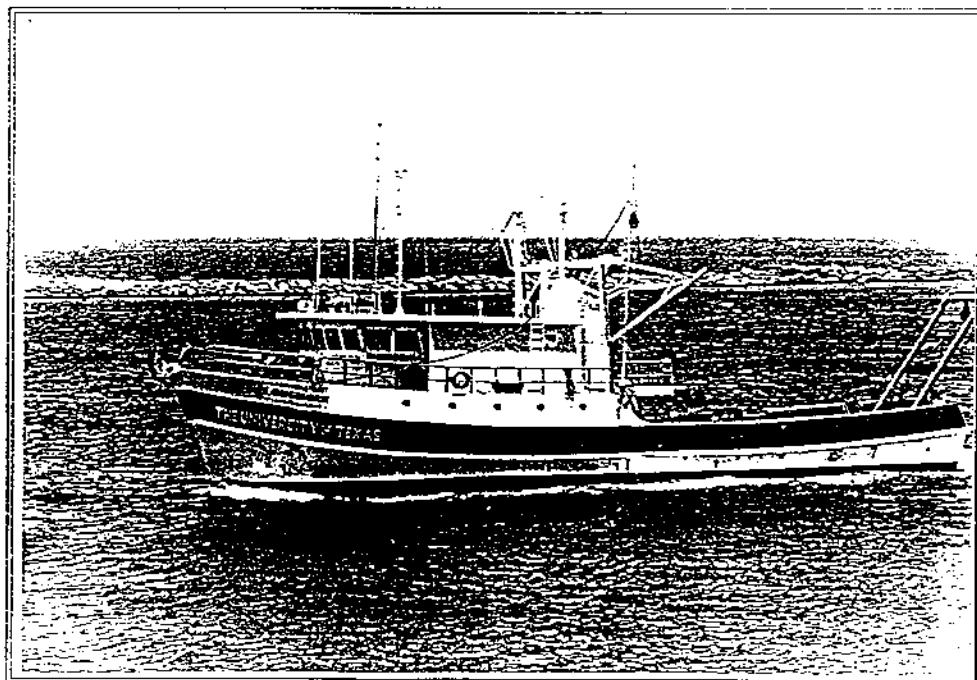

**Attachment No. 12** - Summary of three seismic lines (A,B,C) shot by GECO Sigma (see Attachment 11 for line locations)

## 7. WEATHER

**Attachment No. 13** - Weather maps showing Tropical Storm Josephine in northern Gulf of Mexico.

ATTACHMENT NO. 1 - SUMMARY OF SPECIFICATIONS, *R/V LONGHORN*

*General Purpose Coastal Oceanographic Research Vessel*

## VESSEL

### GENERAL CHARACTERISTICS AND DESCRIPTION

The LONGHORN was designed by Robert L. Harrelson as a general purpose coastal oceanographic research vessel. She was built in 1971 by the Allied Shipyard. For her first fourteen years she served admirably in her intended role. During this period, however, it became evident that additional length was needed to increase her deck space, wheelhouse area, laboratory space, and to provide the ability to operate in a greater range of weather conditions. By 1985 she was in need of a midlife refit, and an NSF/UNOLS Material Inspection Review team indicated items needing correction which could be handled most expeditiously through a major refit. They also recommended that lengthening be seriously considered.

In June, 1986, a midlife refit and lengthening project was completed by the Master Marine Shipyard. A 20-ft. section was added amidships along with a completely new and enlarged wheelhouse, all new living quarters below decks, and all new and expanded laboratories. New, modern marine electronic navigation and communication aids were installed at the same time. The ship had previously been repowered with GM 12V71 diesels. Thus in 1986 the R/V LONGHORN entered into a new phase of her life as an enlarged, improved, and rebuilt vessel. Besides being larger than she was originally (85-ft.), the LONGHORN's draft was reduced by almost one foot and her cruising speed increased by one knot.

#### *Principal Dimensions*

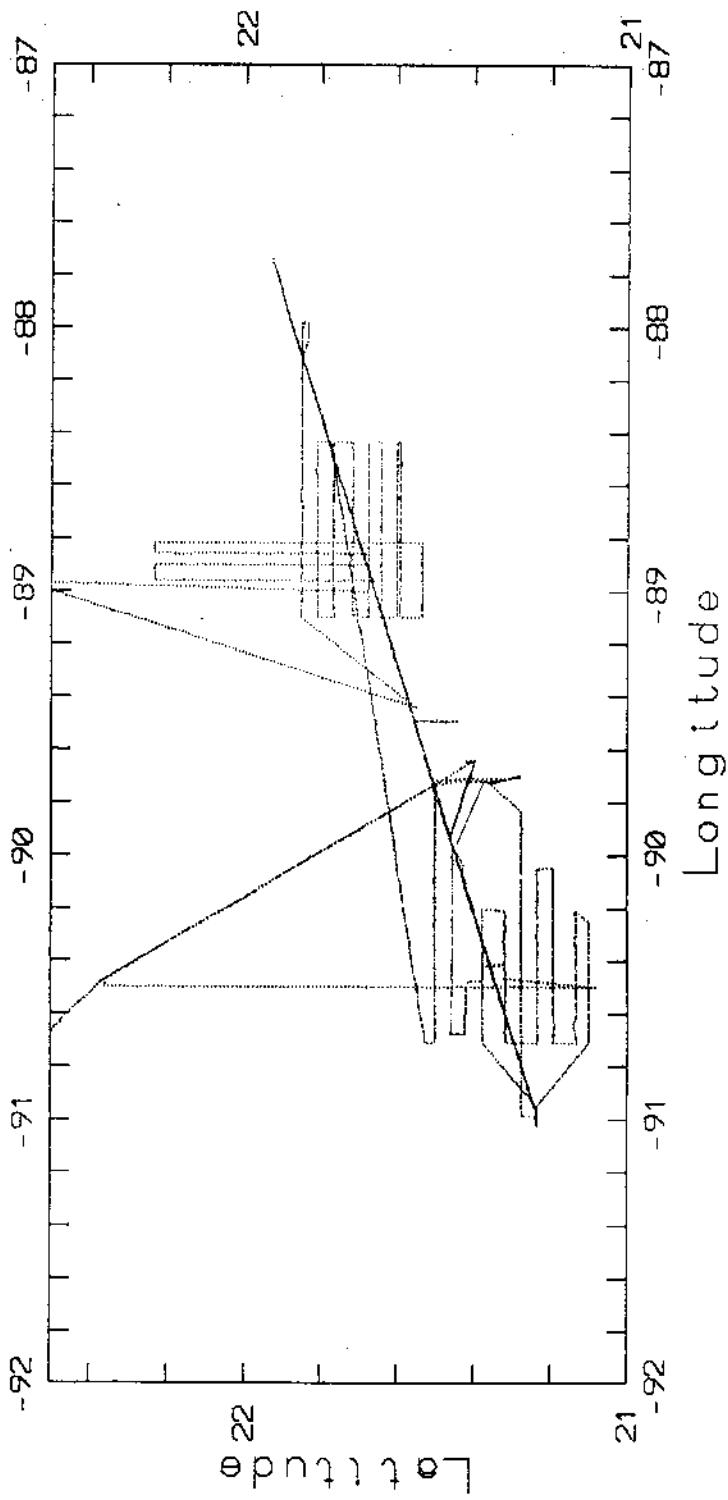

LENGTH OVERALL	102'-10"
LENGTH WATERLINE	94'-5"
BREADTH MLD.	25'-9"
DEPTH MLD.	9'-9"
DRAFT MLD. D.W.L.	6'-8"
DISPLACEMENT	210 tons

#### *Machinery*

PROPELLION	2 Detroit Diesels 12V71
GENERATING	2 75-kw sets, Detroit Diesels 671
BOWTHRUSTER	Marco tunnel thruster, hydraulic
CRANE	Tico 150 marine crane
MAIN WINCH	Dynacon, 9,000' 3x19 1/2" wire rope
HYDRO WINCHES	(1) Dynacon 8000A, 10,000' (3,048m) 1/4" 7x19 stainless steel wire rope; (2) Dynacon 8000A, 10,750' (3,276m) single-conductor 7/32" electromechanical cable

SEA TEMPERATURE (C) :		AVERAGE= 28.46	MAXIMUM= 29.28	AT 0009 HRS.	MINIMUM= 27.92	AT 2334 HRS.
SALINITY (ppt) :		AVERAGE= 35.82	MAXIMUM= 36.21	AT 0343 HRS.	MINIMUM= 35.01	AT 1631 HRS.
BAROMETRIC PRESSURE (mb) :		AVERAGE= 1016.8	MAXIMUM= 1019.0	AT 1503 HRS.	MINIMUM= 1014.0	AT 0000 HRS.
RELATIVE HUMIDITY (%) :		AVERAGE= 0.0	MAXIMUM= 0.0	AT 0000 HRS.	MINIMUM= 0.0	AT 0000 HRS.
WIND SPEED (kts) :		AVERAGE= 27.7	MAXIMUM= 43.8	AT 1656 HRS.	MINIMUM= 10.0	AT 0845 HRS.
MEAN DAILY WIND VELOCITY= 27.4 (kts) FROM 115 DEGREES TRUE						
SOLAR RADIATION-PAR (quanta/cm <sup>2</sup> /sec) :	AVERAGE= 0.00	MAXIMUM= 0.00	AT 0000 HRS.	MINIMUM= 0.00	AT 0000 HRS.	
LIGHT TRANSMISSION (t) :	AVERAGE= 0.0	MAXIMUM= 0.0	AT 0000 HRS.	MINIMUM= 0.0	AT 0000 HRS.	
CHLOROPHYLL-a (mg/m <sup>3</sup> ) :	AVERAGE= 0.00	MAXIMUM= 0.00	AT 0000 HRS.	MINIMUM= 0.00	AT 0000 HRS.	

LONGHORN CRUISE 676 CHIX' 96 CRUISE 1996 - DAILY SCIENCE LOG; DAY # 20 10-11-1996; PAGE # 2

## DAILY SUMMARY

DISTANCE TRAVELED TODAY	154.1 nm						
TOTAL DISTANCE TRAVELED	3346.1 nm						
SHIP'S SPEED (kts) ;	AVERAGE= 8.5	MAXIMUM= 11.9	AT 0821 HRS.		MINIMUM= 0.2	AT 1459 HRS.	
AIR TEMPERATURE (C) ;	AVERAGE= 25.8	MAXIMUM= 28.4	AT 1614 HRS.		MINIMUM= 23.9	AT 1758 HRS.	
SEA TEMPERATURE (C) ;	AVERAGE= 27.36	MAXIMUM= 28.52	AT 0618 HRS.		MINIMUM= 24.77	AT 1624 HRS.	
SALINITY (ppt) ;	AVERAGE= 34.46	MAXIMUM= 36.15	AT 0402 HRS.		MINIMUM= 27.77	AT 1559 HRS.	
BAROMETRIC PRESSURE (mb) ;	AVERAGE= 1019.0	MAXIMUM= 1021.0	AT 1545 HRS.		MINIMUM= 1017.0	AT 0000 HRS.	
RELATIVE HUMIDITY (%) ;	AVERAGE= 0.0	MAXIMUM= 0.0	AT 0000 HRS.		MINIMUM= 0.0	AT 0000 HRS.	
WIND SPEED (kts) ;	AVERAGE= 22.6	MAXIMUM= 40.6	AT 0007 HRS.		MINIMUM= 1.3	AT 1702 HRS.	
MEAN DAILY WIND VELOCITY= 21.3 (kts) FROM 293 DEGREES TRUE							
SOLAR RADIATION-PAR (quanta/cm^2/sec) ;	AVERAGE= 0.00	MAXIMUM= 0.00	AT 0000 HRS.		MINIMUM= 0.00	AT 0000 HRS.	
LIGHT TRANSMISSION (%) ;	AVERAGE= 0.0	MAXIMUM= 0.0	AT 0000 HRS.		MINIMUM= 0.0	AT 0000 HRS.	
CHLOROPHYLL-a (mg/m^3) ;	AVERAGE= 0.00	MAXIMUM= 0.00	AT 0000 HRS.		MINIMUM= 0.00	AT 0000 HRS.

ATTACHMENT NO. 9 - CHART SHOWING OBS TIMELINE (OBS VS.  
TIME/DATE).

## **ATTACHMENT NO. 10 - SUMMARY OF OBS RECORDING PARAMETERS**

### **Chicxulub Experiment**

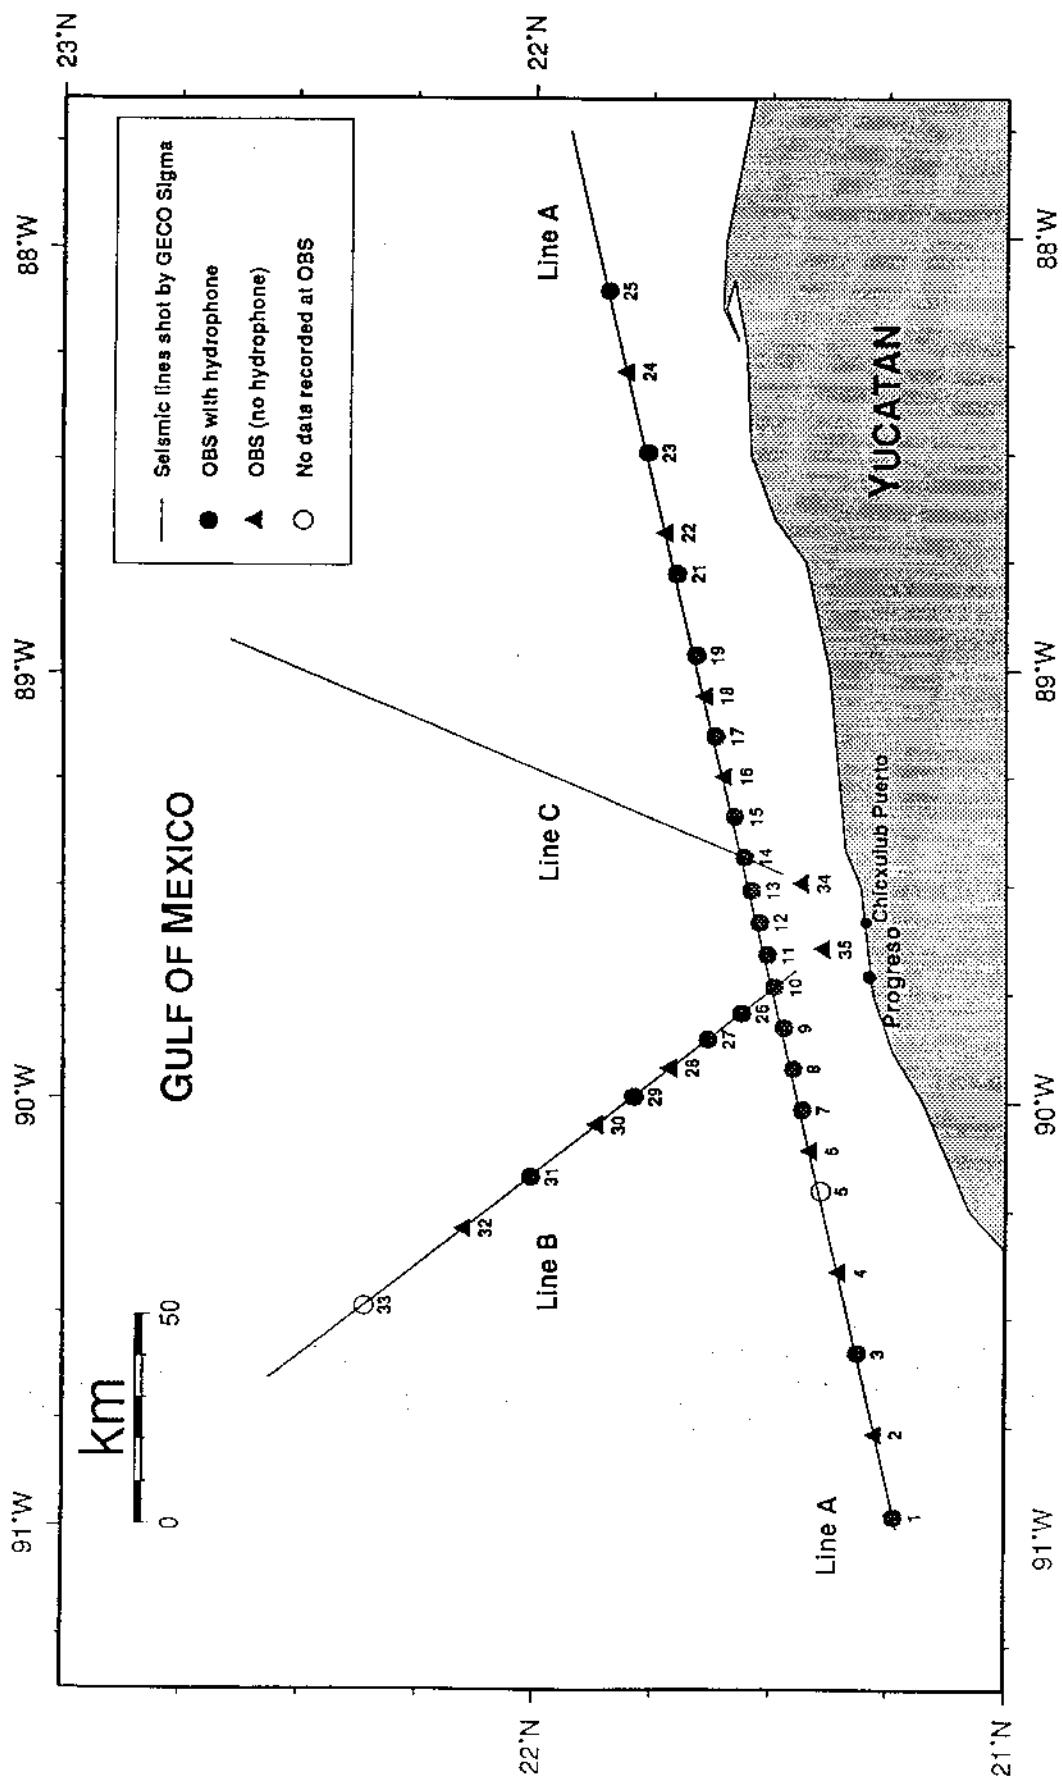

### **UTIG OBS Recording Parameters**

---

Sensors:	Channels 1-3: 3-component, 4.5 Hz, gimbaled geophones, Mark Products L-15B or Oyo GS-11D Channel 4: Hydrophone, Ocean Acoustic Research E-2PD
Sensitivity (unit digitizing level):	Channels 1-3: 1.5 nm/s for stations 2 and 28; 2.3 nm/s for stations 4, 6, 10, 30 and 32; 3.9 nm/s for station 9; 2.5 nm/s for all others Channel 4: 1.0 mPa
Polarity:	Channel 1: vertical, positive down Channels 2, 3: horizontal, — orientation to be determined from recorded water wave arrivals; channels 1, 2 and 3 form a right-hand system Channel 4: positive for increasing pressure
Alias filter frequency and rolloff:	30 Hz, -24 dB/oct
A/D conversion:	14 bits plus dynamic gain ranging
Dynamic range:	126 dB
Sample interval:	10.000 ms
Data acquisition mode:	Continuous with a short (~22 s) gap at data transfer to disk approximately every 665 s (4-channels) or 803 s (3-channels)

---

Dear Tom,

Please find enclosed nine copies of our preliminary cruise report resulting from Cruise No. 95-010 aboard the *RV Longhorn* from September 22, 1996 to October 11, 1996. This report is required by Mexican SRE Diplomatic Note No. DAN-01966 dated June 27, 1996 and Official Documents D00 700(2).-2200 and D00 700(2).-1769. The main report has been translated into Spanish as requested. An English version is also included. Thirteen (13) attachments are also included that summarize further the details of the cruise and the data collected. These have not been translated into Spanish, as they contain technical data and this would not be practical. As requested, we are sending this report to you for forwarding to the US. Embassy for transmittal to the Foreign Ministry (eight copies, one copy is for your files).

Please let us know if anything else is required at this time. Thanks again for all your help.  
We had a very successful cruise.

Sincerely yours,

Richard T. Buffler  
Senior Research Scientist and  
Professor of Geological Sciences
