Msg: MGIH-3016-9177

From: UTIG.AUSTIN

To: UTIG.GALVESTON (RECEIPT)

CC: UTIG.AUSTIN .

Subj: Message for Fred Moore

Olwen, please forward to the Fred Moore, Thanks

Mark Wiederspahn:

Have completed compass and color radar comparisons for 3D grid.

Detect 4 degree difference. Could the radar be skewed 4 degrees to starboard? Will need to check this out in port. Hope all is well.

Regard,  
Tom Shipley

Subj: MESS. FOR FRED MOORE

Msg: DGIH-3020-1348

To: Taylor and Moore

Received your telex of (Bill, the time code identification of this message was not sent on the telex to Austin -- please supply here) \_\_\_\_\_. Sorry to hear it was necessary to replace 9 sections. My estimate was far less, more like 2 to 4. What was the reason for replacements? Did all the spares you placed in the streamer check out OK? Please have Marc Hirsch send analysis and inventory when time allows, including state of streamer winch and brake system.

I am very concerned and surprised that you are still having gun problems. I really expected that fixes Oscar and Ryan were working on would smooth out most of the remaining problems. When you have time, we would like to have some analysis of the problems and any suggested fixes.

I hope everything has settled down by the time you receive this. We would appreciate a weekly summary of activities and a sentence or two added to each daily position report describing progress or problems.

Taira promises to send me needed seismic sections for Nankai. Taira said that we will not be docking at the ORI pier but about 20 minutes away by car. We have agreed to supply a Del Norte miniranger. Trying to find a source for rental at this time.

Regards,  
Tom
